**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

# **1 Introduction to Phase II CORE Certification Test Suite**

## **1.1 PURPOSE OF THIS DOCUMENT**

This Phase II CORE Certification Test Suite document contains all of the requirements that must be met in order for an entity seeking Phase II CORE Certification to be awarded a Phase II CORE Certified Seal. As such, this Test Suite includes:

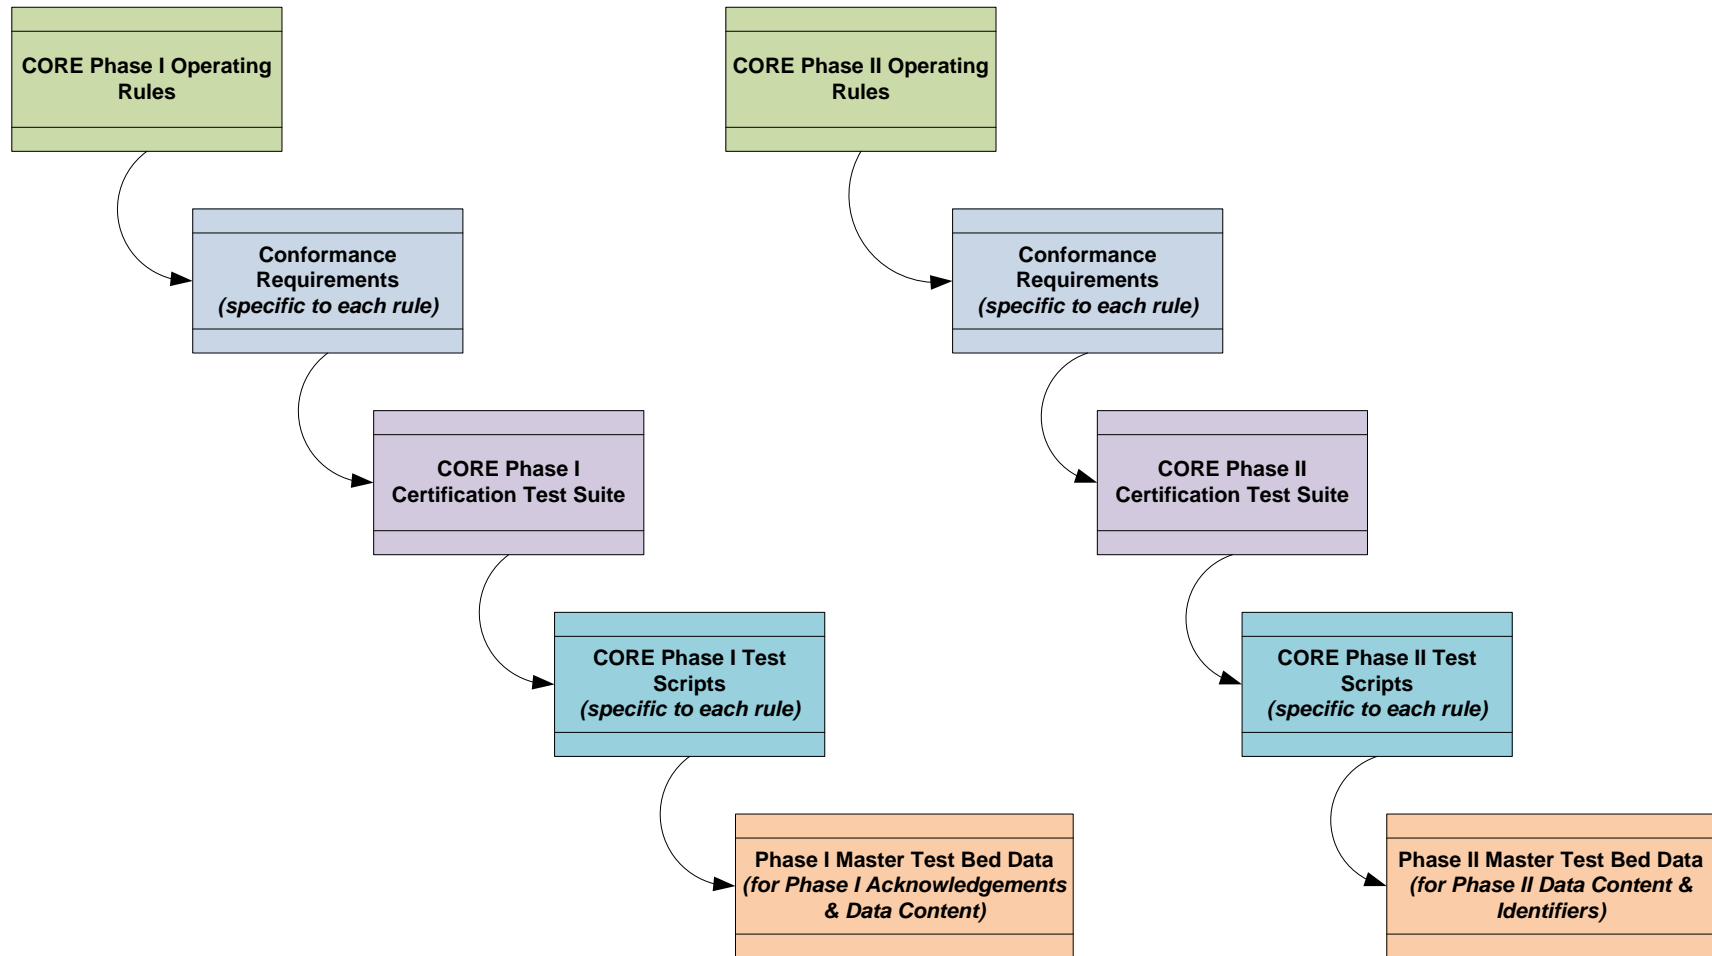

- Four Master Scenarios describing the end-to-end eligibility information exchange process (see §2.1) and the end-to-end claim status inquiry process in non-technical language (see §2.2).
- The specific conformance requirements and detailed testing for each Phase II CORE Rule (see §1.3, §1.4 and §3).
- The required Certification Testing for each Rule, including specific detailed step-by-step test scripts by rule (see §1.5 and §3 for each rule-specific testing requirements).
- Guidance to help stakeholders better understand the various types of stakeholders to which the Phase II CORE rules apply and how to determine when a specific rule detailed test script applies is also included (see §1.4).
- An Appendix that contains the detailed Test Suite Supplement (see §4.1), which provides information and guidance about the Phase II CORE Master Test Bed Data, how the test data are made available, as well as loading and using the Master Test Bed Data. The Test Suite Supplement also includes specific instructions for certain test bed data elements that may be modified when loading and using the test data for certification testing.

Note the Phase II CORE Guiding Principles apply to the entire set of rules, including the Test Suite. As with Phase I testing, Phase II testing is not exhaustive and does not use production-level testing.

**PHASE II CORE CERTIFICATION TEST SUITE  
VERSION 2.1.0 MARCH 2011**

The figure below depicts the high-level parts of the testing process:

**Key Components of Phase I and Phase II CORE Certification Testing**

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

## **1.2 APPLICABILITY OF THIS DOCUMENT**

The Phase II CORE Certification Test Suite must be used by all stakeholders undergoing Phase II CORE Certification Testing. This is required in order to maintain standard and consistent test results and Phase II CORE rule compliance. There are no exceptions to this requirement.

## **1.3 THE MASTER SCENARIOS**

The Phase II CORE Certification Test Suite uses four Master Scenarios (§2) to describe both the real time and batch business processes for end-to-end insurance verification/eligibility inquiries and for end-to-end claim status inquiries using business language, not technical specifications to the extent appropriate.

- Master Scenario #1: Eligibility Single/Dual Clearinghouse Provider-to-Health Plan Model
- Master Scenario #2: Eligibility Provider Direct to Health Plan Model
- Master Scenario #3: Claim Status Single/Dual Clearinghouse Provider-to-Health Plan Model
- Master Scenario #4: Claim Status Provider Direct to Health Plan Model

The overall business process for an insurance verification/eligibility inquiry and for a claim status inquiry does not change from a business viewpoint for each Phase II CORE rule. Rather, each Phase II CORE rule addresses a critical interoperability activity/task within the common business process.

Using only four Master Scenarios for all rules simplifies rule test scenario development since the key variables for each rule will be only the actual conformance language of the rule and then each test scenario's test objectives, assumptions, and detailed step-by-step test scripts.

## **1.4 STRUCTURE OF TEST SCENARIOS FOR ALL RULES**

Each test scenario for each rule contains the following sections:

- Key Rule Requirements (the Phase II CORE Rules document contains the actual rule language and is the final authority for all rule requirements)
- Certification conformance requirements by rule
- Test assumptions by rule
- Detailed step-by-step test scripts addressing each conformance requirement by rule for each stakeholder to which the test script applies

Each stakeholder may indicate that a specific test script does not apply to it and is required to provide a rationale for indicating a specific test script is not applicable. (See §1.5.1 for guidance in determining when a specific test script may not apply.)

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

## **1.5 DETAILED STEP-BY-STEP TEST SCRIPTS**

### ***1.5.1 Stakeholder Categories –Determining Test Script Applicability***

The Detailed Step-by-Step Test Scripts for each rule specify for which stakeholder type each test script applies. The stakeholder categories are:

- Provider
- Health Plan
- Clearinghouse
- Vendor

Oftentimes Providers and Health Plans outsource various functions to Clearinghouses. In such cases a specific Clearinghouse may be acting on behalf of either a Provider stakeholder or a Health Plan stakeholder. Thus, when establishing a Certification Test Profile with a CORE-authorized Certification Test Vendor, a Clearinghouse may be asked to indicate if it is a Provider/Clearinghouse or a Health Plan/Clearinghouse. When a Provider/Clearinghouse role is selected, the Detailed Step-by-Step Test Scripts applicable to a Provider will apply to a Provider/Clearinghouse. Similarly, when a Health Plan/Clearinghouse role is selected, the Detailed Step-by-Step Test Scripts applicable to a Health Plan will apply to a Health Plan/Clearinghouse.

Vendor stakeholders must certify each specific product separately (see Guiding Principles and Phase II CORE 202 Certification Policy version 2.1.0.). Thus, when establishing a Certification Test Profile with a CORE-authorized Certification Testing Vendor you will be given the option to indicate if the product you are certifying is a Provider/Vendor product or a Health Plan/Vendor product. The Detailed Step-by-Step Test Scripts applicable to a Provider will apply to a Provider/Vendor product. Similarly, when you are certifying a Health Plan product the Detailed Step-by-Step Test Scripts applicable to a Health Plan will apply to a Health Plan/Vendor product.

### ***1.5.2 Guidance for Health Plans Seeking Phase II CORE Certification Who Work With a Phase II CORE Certified Clearinghouse***

Health plans seeking Phase II CORE certification that use a clearinghouse to send back eligibility or claim status responses to providers, and to receive eligibility and claim status inquiries from providers, may have some unique Phase II CORE certification issues. Because there is a clearinghouse, or similar type of intermediary, between the health plan's eligibility and claim status system and the provider's eligibility system, the clearinghouse will act as a "proxy" for some of the Phase II CORE certification requirements outlined in the Phase II CORE Test Suite. Therefore, dependent upon the scenario between the health plan and clearinghouse, the health plan may not have to undergo certification testing for some of the rules, but rather may choose the N/A option for testing for a rule, and then upload a rationale statement explaining the situation to the CORE-authorized testing vendor.

**Reminder:** *There exist varying scenarios for this type of situation. The requirements for meeting the Phase II CORE rule requirements for clearinghouses and health plans differ by situation, as such variability is dependent on how the health plan interacts with the clearinghouse and what services (i.e., functions and capabilities) the clearinghouse provides to the health plan. Therefore, please keep in mind that certification testing will differ by scenario.*

### ***1.5.3 Guidance for Providers Seeking Phase II CORE Certification Who Work With a Phase II CORE Certified Clearinghouse***

Provider organizations seeking Phase II CORE certification that use a clearinghouse to send eligibility or claim status requests to payers, and to receive eligibility and claim status responses from payers, may have some unique Phase II CORE certification issues. Because there is a clearinghouse, or similar type of intermediary, between

## PHASE II CORE CERTIFICATION TEST SUITE VERSION 2.1.0 MARCH 2011

the provider's eligibility and claim status system and the payer's eligibility and claim status system, the clearinghouse will act as a "proxy" for some of the Phase II CORE certification requirements outlined in the Phase II CORE Test Suite. Therefore, dependent upon the scenario between the provider and clearinghouse, the provider may not have to undergo certification testing for some of the rules, but rather may choose the N/A option for testing for a rule, and then upload a rationale statement explaining the situation to the CORE-authorized testing vendor.

**Reminder:** There exist varying scenarios for this type of situation. The requirements for meeting the Phase II CORE rule requirements for clearinghouses and providers differ by situation, as such variability is dependent on how the provider interacts with the clearinghouse and what services (i.e., functions and capabilities) the clearinghouse provides to the provider. Therefore, please keep in mind that certification testing will differ by scenario.

### 1.6 PHASE II TEST SUITE SUPPLEMENT

The Phase II CORE Test Suite Supplement provides additional information and details about the use and format of the Phase II CORE Master Test Bed Data, as it applies to the Phase II CORE 258 Normalizing Last Name Rule, the Phase II CORE 259 AAA Error Code Reporting Rule; and Phase II CORE 260 Eligibility & Benefits Data Content (270/271) Rule. Since the Phase II CORE 250 Claim Status Rule does not address any content requirements for the ASC X12 005010X212 Health Care Claim Status Request and Response (276/277) Technical Report Type 3 (TR3) implementation guide and associated errata (hereafter v5010 276, v5010 277 or v5010 276/v5010 277) transactions there is no need for Phase II CORE Master Test Bed Data specific to these transactions for Phase II certification testing. The supplement is to be used in conjunction with the Phase II CORE Certification Test Suite. It does not replace any of the Phase II CORE Policies and Rules or the Phase II CORE Certification Test Suite, but rather is intended to provide additional information and details regarding the use and format of the Phase II CORE Master Test Bed Data. Note that the Phase II CORE Master Test Bed Data only applies to the Phase II CORE 258 Normalizing Last Name Rule, the Phase II CORE 259 AAA Error Code Reporting Rule; and Phase II CORE 260 Eligibility & Benefit Data Content (270/271) Rule; the other Phase II CORE Rules do not require the use of the test data. The other Phase II CORE rules either are testing using paper-based review methods or through Connectivity.

#### 1.6.1 *Phase II Master Test Bed Data*

The scope of the Phase II CORE Master Test Bed Data are limited to data needed for entities seeking to become Phase II CORE-certified to create and populate their internal files and/or databases. The Phase II CORE Master Test Bed Data builds upon and extends the Phase I CORE Master Test Bed Data. These data are then used for internal pre-certification testing and Phase II CORE certification testing for the Phase II CORE rules that require transaction-based testing, e.g., Phase II CORE Rules:

- Phase II CORE 258 Normalizing Patient Last Name
- Phase II CORE 259 AAA Error Code Reporting
- Phase II CORE 260 Eligibility & Data Content (270/271)

Thus, the CORE-authorized testing vendor uses only the Phase II CORE Master Test Bed Data to conduct Phase II CORE certification testing for the Phase II CORE 258 Normalizing Last Name, the Phase II CORE 259 AAA Error Code Reporting Errors, and Phase II CORE 260 Eligibility & Data Content (270/271) rules. The other Phase II CORE rules either are tested using paper-based review methods or through Connectivity. The scope of the CORE Master Test Bed Data are not intended to include all data that an entity may require in order to load their internal systems. Therefore, entities may need to add other data to the CORE Master Test Bed Data when loading internal systems.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

Since the Phase II CORE rules do not address the specific use and data content of the ISA and GS control segments, the Phase II CORE Master Test Bed Data does not contain nor specify specific values that must be used in these control segments.

Thus, the CORE-authorized testing vendor will be using only the Phase II CORE Master Test Bed Data to conduct Phase II CORE certification testing for the Phase II CORE 258 Normalizing Last Name, the Phase II CORE 259 AAA Error Code Reporting; and Phase II CORE 260 Eligibility & Data Content (270/271) rules.

The Phase II CORE Master Test Data accompanies this Phase II CORE Certification Test Suite.

- All entities seeking Phase II CORE certification will be required to test against this Phase II CORE Master Test Bed Data.
- This data will be made available to all entities seeking Phase II CORE certification for use of pre-certification internal self-testing.
- The Phase II Master Test Suite Supplement should be used in accompaniment with the Phase II CORE Master Test Data (see Appendix).

**1.6.1.1 Applicability of the Phase II CORE Master Test Bed Data**

The Phase II CORE Master Test Bed Data are applicable only to the Phase II CORE 258 Normalizing Last Name, the Phase II CORE 259 AAA Error Code Reporting; and Phase II CORE 260 Eligibility & Data Content (270/271) rules; however, all Phase II CORE certification testing related to these two rules will be conducted using the same Phase II CORE Master Test Bed Data, thus ensuring reliable and consistent test results for all CORE-authorized testing entities.

*The Phase II CORE Master Test Bed Data are comprised of base data for several subscribers, dependents and their associated health plan coverage. The Phase II CORE Test Suite Supplement provides guidance about the Phase II CORE Master Test Bed Data. The Phase II CORE Master Test Bed Data are supplied only in an Excel spreadsheet format in a separate Excel Workbook. Although Phase II CORE certification testing will use this Phase II CORE Master Test Bed Data as presented in the base data, the types of transactions that will be tested against this data are specified in the Phase II CORE Certification Test Suite under the Test Scripts for each of the rules.*

The Phase II CORE Certification Test Suite requires that all organizations seeking Phase II CORE certification be tested using the same Phase II CORE Master Test Bed Data. The Phase II CORE Master Test Bed Data are distributed in Excel spreadsheet format so that organizations may easily extract the key data elements and load them into their internal test databases. The CORE-authorized testing vendor will use only the Phase II CORE Master Test Bed Data to conduct Phase II CORE certification testing for the Phase II CORE 258 Normalizing Last Name, the Phase II CORE 259 AAA Error Code Reporting; and Phase II CORE 260 Eligibility & Data Content (270/271) rules. The Excel document containing the Phase II CORE Master Test Bed Data is available for download at the CAQH CORE® website ([www.caqh.org](http://www.caqh.org)).

## **2 The Master Scenarios**

### **2.1 ELIGIBILITY MASTER SCENARIOS**

### **2.2 SINGLE/DUAL CLEARINGHOUSE PROVIDER-TO-HEALTH PLAN BUSINESS MODEL**

#### **2.2.1 Introduction**

This CORE Master Business Process Scenario describes both the real time and batch business processes for end-to-end insurance verification/eligibility inquiries using business language, not technical specifications to the extent appropriate, in which there are either one or two clearinghouses providing services to the healthcare provider and health plan or information source. Since the overall business process for insurance verification/eligibility inquiry does not fundamentally change from a business viewpoint, each Phase I and Phase II CORE rule addresses a critical interoperability activity/task within the common business process. Thus, the focus for this scenario is on the EDI aspects of the overall end-to-end business process and not on attempting to describe all of the activities and tasks typically performed by each of the stakeholders in the process.

#### **2.2.2 Background**

This scenario describes the healthcare insurance verification/eligibility end-to-end business process and the key activities and tasks conducted between a healthcare provider where each party uses the services of a healthcare clearinghouse. For purposes of Phase II CORE Certification Testing, stakeholders include providers, health plans, clearinghouses, switches, other intermediaries, and solution vendors.

Each stakeholder type is equipped with an automated system (the “system”) appropriate to its needs, e.g., a provider would have a hospital (or health) information system, commonly referred to as an HIS, or an automated practice management system (the “system”), commonly referred to as a PMS.

The “system” is defined as all of the components necessary for the stakeholder to conduct its automated business processes, e.g., all necessary network nodes, all platform components delivered by the vendor, and all the vendor components (e.g. documentation) included with the system. The system may consist of one or many workstations, servers and mainframe systems, and may include capture of patient registration information at the point of patient intake (or scheduling) at the workstation if the stakeholder is a provider.

#### **2.2.3 Eligibility Business Process Description**

##### **2.2.3.1 Appointment Scheduling Process**

An appointment scheduler at the provider’s office is scheduling via phone an appointment for either an office visit or admission (depending on the type of provider) for a patient in 2 weeks. The scheduler inquires about the reason for the appointment, collects data from the patient following prompts on the workstation and enters all of the necessary information into the PMS/HIS.

When all of the necessary patient demographic and insurance information is entered, the scheduler is prompted to submit an insurance verification transaction by either a menu selection or by clicking an icon (as determined by the PMS/HIS vendor user interface design).

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

The PMS/HIS automatically edits the eligibility transaction for completeness and valid data values where applicable and prompts the scheduler to correct any invalid or omitted data. When the transaction editing is completed, the PMS/HIS assigns a unique internal tracking number, records the identification and address of the workstation used by the scheduler, and creates the eligibility inquiry transaction.

Using internal tables/files, the PMS/HIS determines the Internet address for its clearinghouse, creates the HTTP/S message, assigns a payload identifier, records the date/time, links the message to the eligibility inquiry transaction, and establishes a communications session with the clearinghouse's system. The eligibility inquiry transaction created by the PMS/HIS for transfer to its clearinghouse/switch may be either in a proprietary format or a fully enveloped ASC X12 Interchange containing the v5010 270 eligibility inquiry transaction set.

**2.2.3.2 Provider Clearinghouse Real Time Eligibility Inquiry Process**

The clearinghouse's Internet portal accepts the provider's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the eligibility inquiry transaction, which is then extracted and passed to the appropriate systems in the clearinghouse for further processing. The clearinghouse's system edits the eligibility transaction for completeness and valid data values where applicable. If the eligibility transaction fails editing, the clearinghouse returns to the provider an appropriate error message or acknowledgement describing the reasons for failure and rejection, thereby allowing the provider to correct and re-submit the eligibility transaction. Such error message or acknowledgement may be either a proprietary or valid ASC X12 Acknowledgement, depending on the type and range of services the clearinghouse is providing.

Using internal tables/files and/or an external directory service, the clearinghouse system determines the Internet address for the clearinghouse serving the health plan specified in the provider's eligibility inquiry transaction, creates and envelopes the complete ASC X12 Interchange containing the v5010 270 inquiry, creates the HTTP/S message, assigns a payload identifier, records the date/time, links the message to the ASC X12 v5010 270 Interchange, and establishes a communications session with the health plan's clearinghouse. Depending on the range and type of services being provided to the provider by the clearinghouse, the clearinghouse may or may not have responsibility for creating the correct ASC X12 Interchange containing the v5010 270 Eligibility inquiry or for performing other data validation/transformation and/or editing functions prior to forwarding the eligibility inquiry to either the health plan or the health plan's clearinghouse. Upon successful transfer of the ASC X12 v5010 270 Interchange to the health plan's clearinghouse, the provider's clearinghouse maintains the communications session open and active until receipt of either a ASC X12 v5010 999 or ASC X12 v5010 271 Interchange from the health plan's clearinghouse.<sup>1</sup>

If the ASC X12 v5010 270 Interchange fails the ASC X12 v5010 TR3 implementation guide verification at the health plan's clearinghouse, the provider's clearinghouse receives the v5010 999 Implementation Acknowledgement indicating the acceptance or rejection of the Functional Group, extracts/reformats the acknowledgement and takes appropriate action to resolve the any errors indicated or the rejection. This may be by returning it to the provider's PMS/HIS or correcting the errors within the clearinghouse.

---

<sup>1</sup> Alternatively, a single clearinghouse may be serving both the provider and the health plan to which the eligibility inquiry transaction is to be transmitted. In this case, the single clearinghouse would not only perform the reformatting of non-standard data and non-standard format received from the provider into the HIPAA-adopted standard, but would then perform the reformatting of the standard data and standard format into non-standard data and non-standard format required by the health plan. A similar set of functions would be performed when processing the eligibility response transaction received from the health plan. See [Health Plan Clearinghouse Real Time Eligibility Inquiry Process](#) section in this document for a complete description of this process.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

When the ASC X12 v5010 271 eligibility response transaction is received from the health plan's clearinghouse, the clearinghouse's Internet portal records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC X12 v5010 271 Interchange, returns a signal to the health plan's clearinghouse that the ASC X12 v5010 271 Interchange payload has been successfully stored into persistent storage, and passes the ASC X12 v5010 271 Interchange to the clearinghouse's EDI management system for further processing. The clearinghouse's EDI management system processes (validates) the ASC X12 v5010 271 Interchange which may contain either a v5010 271 with AAA Validation Request rejection/error codes or a v5010 271 with the requested benefit data. The EDI management system extracts the v5010 271 response data, creates the required eligibility response transaction required by the provider's PMS/HIS (may be either a proprietary or valid ASC X12 v5010 271 Interchange), and transfers the eligibility response transaction to the provider's PMS/HIS.

**2.2.3.3 Health Plan Clearinghouse Real Time Eligibility Inquiry Process**

The health plan's clearinghouse Internet portal accepts the provider's clearinghouse's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC X12 v5010 270 Interchange, returns a signal to the provider's clearinghouse that the ASC X12 v5010 270 Interchange payload has been successfully stored into persistent storage, and passes the ASC X12 v5010 270 Interchange to the clearinghouse's EDI management system for further processing. The clearinghouse's EDI management system, processes (validates) the ASC X12 v5010 270 Interchange.

If the ASC X12 v5010 270 Interchange passes ASC X12 v5010 TR3 implementation guide verification, the EDI management system extracts the eligibility inquiry data from the v5010 270 transaction set, creates the required internal eligibility inquiry transaction required by the health plan. Using internal tables/files and/or an external directory service, the clearinghouse system determines the Internet address for the health plan specified in the provider's eligibility inquiry transaction, creates the HTTP/S message, assigns a payload identifier, records the date/time, links the message to the eligibility inquiry transaction, and establishes a communications session with the health plan if such a communications link is not already open and active. Upon successful transfer of the eligibility inquiry transaction to the health plan, the clearinghouse maintains the communication session open and active pending receipt of the eligibility response transaction from the health plan.

If the ASC X12 v5010 270 Interchange fails ASC X12 v5010 TR3 implementation guide verification, the EDI management system automatically generates the v5010 999 Implementation Acknowledgement indicating the acceptance or rejection of the Functional Group, returns the acceptance or rejection acknowledgement to the provider's clearinghouse, terminates the communications session (if necessary) and discontinues any further processing of the inquiry transaction.

When the eligibility response transaction is received from the health plan, the clearinghouse's EDI management system edits the eligibility response data for correctness and completeness, creates the ASC X12 Interchange containing the v5010 271 eligibility response, passes the ASC X12 v5010 271 Interchange to the open communications session which returns the ASC X12 v5010 271 Interchange to the provider's clearinghouse. The ASC X12 v5010 271 Interchange may contain either a v5010 271 with AAA Validation Request rejection/error codes or a v5010 271 with the requested benefit data.

**2.2.3.4 Health Plan Real Time Eligibility Inquiry Process**

The health plan's Internet portal accepts the clearinghouse's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the eligibility inquiry transaction, which is then extracted and passed to the health plan's eligibility inquiry system for processing. The eligibility system accesses all of the necessary internal data stores (files, databases, etc.) to process the eligibility inquiry transaction to determine the benefits and status of coverage for the individual identified in the inquiry. The data is then assembled and routed to the health plan's clearinghouse. When the clearinghouse signals successful receipt of the eligibility response transaction to the health plan's system, the communications session may be terminated or maintained open and active as determined between the health plan and its clearinghouse.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

**2.2.3.5 Provider Real Time Eligibility Response Process**

The provider's PMS/HIS receives the eligibility response transaction from its clearinghouse, records the message receipt date/time, assigns an internal tracking number to the message linked to the eligibility response transaction, and matches the tracking number, message receipt date/time to the corresponding eligibility inquiry transaction. The PMS/HIS then processes (validates) the eligibility response transaction, which is routed to the correct workstation for display to the scheduler.

If the eligibility response transaction indicates the inquiry was rejected, the PMS/HIS displays the reasons for such rejection, enabling the scheduler to resolve the rejection by obtaining corrected data as indicated from the patient during the initial appointment/admission scheduling phone call. The PMS/HIS then resubmits the corrected eligibility inquiry.

If the eligibility response transaction contains the requested benefit coverage, benefit status, and patient financial responsibility information, the PMS/HIS displays the benefit information, enabling the scheduler to confirm the benefit coverage and status with the patient and to inform the patient of any co-pay, co-insurance, or deductible amounts during the initial appointment/admission scheduling phone call.

The provider's scheduler then confirms the date and time of the appointment/admission with the patient, reminds the patient of any information required at the time of the appointment/admission and concludes the phone call with the patient.

**2.2.3.6 Provider Pre-Appointment Batch Eligibility Process**

On a daily basis the provider's PMS/HIS automatically scans all scheduled appointments/admissions for two days in advance of the current date, extracts all of the necessary data, creates one or more batches of eligibility inquiries for each health plan covering the patient appointments/admissions for that date, assigns unique internal tracking numbers and records the date/time for each batch.

Using internal tables/files and/or an external directory service, the PMS/HIS determines the Internet address for each health plan, envelopes the complete ASC X12 Interchange containing the batch of v5010 270 inquiries for each health plan, creates the HTTP/S message, assigns a payload identifier, records the date/time, links the message to the correct batch ASC X12 v5010 270 Interchange, establishes a communications session with each health plan's system and transfers the batch of eligibility inquiry transactions in either a proprietary non-standard format or ASC X12 v5010 270 Interchange to its clearinghouse for transmission to the health plan's clearinghouse prior to 9:00 pm ET, the daily cut-off time for batch submissions.

**2.2.3.7 Provider Clearinghouse Batch Eligibility Inquiry Process**

The clearinghouse's Internet portal accepts the provider's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the eligibility inquiry transaction, which is then extracted and passed to the appropriate systems in the clearinghouse for further processing. The clearinghouse's system edits the eligibility transaction for completeness and valid data values where applicable. If the eligibility transaction fails editing, the clearinghouse returns to the provider an appropriate error message or acknowledgement describing the reasons for failure and rejection, thereby allowing the provider to correct and re-submit the eligibility transaction. Such error message or acknowledgement may be either a proprietary or valid ASC X12 Acknowledgement, depending on the type and range of services the clearinghouse is providing.

Using internal tables/files and/or an external directory service, the clearinghouse system determines the Internet address for the clearinghouse serving the health plan specified in the provider's eligibility inquiry transaction, creates and envelopes the complete ASC X12 Interchange containing the v5010 270 inquiry, creates the HTTP/S message, assigns a payload identifier, records the date/time, links the message to the ASC X12 v5010 270 Interchange, and establishes a communications session with the health plan's clearinghouse. Depending on the range and type of services being provided to the provider by the clearinghouse, the clearinghouse may or may not have responsibility for creating the correct ASC X12 Interchange containing the v5010 270 Eligibility inquiry or for performing other data validation/transformation and/or

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

editing functions prior to forwarding the eligibility inquiry to either the health plan or the health plan's clearinghouse. Upon successful transfer of the ASC X12 v5010 270 Interchange to the health plan's clearinghouse, the provider's clearinghouse either terminates (if necessary) or maintains the communications session open and active until receipt of either a ASC X12 v5010 999 or ASC X12 v5010 271 Interchange from the health plan's clearinghouse.<sup>2</sup>

If the ASC X12 v5010 270 Interchange fails ASC X12 v5010 TR3 implementation guide verification at the health plan's clearinghouse, the provider's clearinghouse receives the v5010 999 Implementation Acknowledgement indicating the acceptance or rejection of the Functional Group, extracts/reformats the acceptance or rejection acknowledgement and takes appropriate action to resolve errors indicated or the rejection. This may be by returning it to the provider's PMS/HIS or correcting the errors within the clearinghouse.

When the ASC X12 v5010 271 eligibility response transaction is received from the health plan's clearinghouse, the clearinghouse's Internet portal records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC X12 v5010 271 Interchange, returns a signal to the health plan's clearinghouse that the ASC X12 v5010 271 Interchange payload has been successfully stored into persistent storage, and passes the ASC X12 v5010 271 Interchange to the clearinghouse's EDI management system for further processing. The clearinghouse's EDI management system processes (validates) the ASC X12 v5010 271 Interchange which may contain either a v5010 271 with AAA Validation Request rejection/error codes or a v5010 271 with the requested benefit data. The EDI management system extracts the v5010 271 response data, creates the required eligibility response transaction required by the provider's PMS/HIS (may be either a proprietary or valid ASC X12 v5010 271 Interchange), and transfers the eligibility response transaction to the provider's PMS/HIS.

#### **2.2.3.8 Health Plan Clearinghouse Batch Eligibility Inquiry Process**

The health plan's clearinghouse Internet portal accepts the provider's clearinghouse's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC X12 v5010 270 Interchange, returns a signal to the provider's clearinghouse that the ASC X12 v5010 270 Interchange payload has been successfully stored into persistent storage, and passes the ASC X12 v5010 270 Interchange to the clearinghouse's EDI management system for further processing. The clearinghouse's EDI management system, processes (validates) the ASC X12 v5010 270 Interchange.

Upon completion of the verification of ASC X12 v5010 270 Interchange against the ASC X12 v5010 TR3 implementation guide, the EDI management system automatically generates the v5010 999 Implementation Acknowledgement indicating acceptance of the Functional Group, returns the ASC X12 v5010 999 Interchange to the provider's clearinghouse, extracts the eligibility inquiry data from the v5010 270 transaction set, and creates the required internal eligibility inquiry transactions required by the health plan.

Using internal tables/files and/or an external directory service, the clearinghouse system determines the Internet address for the health plan specified in the provider's eligibility inquiry transaction, creates the HTTP/S message, assigns a payload identifier, records the date/time, links the message to the eligibility inquiry transaction, and establishes a communications session with the health plan if such a communications link is not already open and active. Upon successful transfer of the eligibility inquiry

---

<sup>2</sup> Alternatively, a single clearinghouse may be serving both the provider and the health plan to which the eligibility inquiry transaction is to be transmitted. In this case, the single clearinghouse would not only perform the reformatting of non-standard data and non-standard format received from the provider into the HIPAA-adopted standard, but would then perform the reformatting of the standard data and standard format into non-standard data and non-standard format required by the health plan. A similar set of functions would be performed when processing the eligibility response transaction received from the health plan. See [Health Plan Clearinghouse Real Time Eligibility Inquiry Process](#) section in this document for a complete description of this process.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

transactions to the health plan, the clearinghouse either terminates (if necessary) or maintains the communication session open and active pending receipt of the eligibility response transactions from the health plan.

If the ASC X12 v5010 270 Interchange fails ASC X12 v5010 TR3 implementation guide verification, the EDI management system automatically generates the v5010 999 Implementation Acknowledgement indicating rejection of the Functional Group, returns the ASC X12 v5010 999 Interchange to the provider's clearinghouse, terminates the communications session (if necessary) and discontinues any further processing of the inquiry transaction.

When the eligibility response transactions are received from the health plan, the clearinghouse's EDI management system edits the eligibility response data for correctness and completeness, creates the ASC X12 Interchange containing the v5010 271 eligibility responses, passes the ASC X12 v5010 271 Interchange to the communications module which returns the ASC X12 v5010 271 Interchange to the provider's clearinghouse. The ASC X12 v5010 271 Interchange may contain either a v5010 271 with AAA Validation Request rejection/error codes or a v5010 271 with the requested benefit data.

#### **2.2.3.9 Health Plan Batch Eligibility Inquiry Process**

The health plan's Internet portal accepts the provider's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the batch ASC X12 v5010 270 Interchange, which is then extracted and passed to the health plan's EDI management system for further processing. The health plan's Internet portal returns the correct HTTP message accepted code to the provider's PMS/HIS and terminates the communications session.

The health plan's EDI management system, processes (validates) the batch ASC X12 v5010 270 Interchange. If the batch ASC X12 v5010 270 Interchange fails ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the v5010 999 Implementation Acknowledgement indicating the rejection of the Functional Group, stages the rejection acknowledgement for subsequent retrieval by the provider's PMS/HIS, and discontinues any further processing of the batch ASC X12 v5010 270 Interchange.

If the batch ASC X12 v5010 270 Interchange passes (with or without errors) ASC X12 v5010 TR3 implementation guide verification, the EDI management system automatically generates the v5010 999 Implementation Acknowledgement indicating the acceptance of the ASC X12 v5010 270 Functional Group, and stages the acceptance acknowledgement for subsequent retrieval by the provider's PMS/HIS.

The EDI management system extracts the eligibility inquiry data from the v5010 270 transaction set, creates the required internal inquiry transaction(s) which are routed to the eligibility system for processing. The eligibility system accesses all of the necessary internal data stores (files, databases, etc.) to process the eligibility inquiries to determine the benefits and status of coverage for each of the individuals identified in the inquiries. The data is then assembled and routed to the health plan's EDI management system.

The EDI management system edits the eligibility response data for correctness and completeness, creates the batch(es) ASC X12 Interchange containing the v5010 271 eligibility responses, stages the batch(es) ASC X12 v5010 271 Interchange for subsequent retrieval by the provider's PMS/HIS.

#### **2.2.3.10 Provider's Pre-Appointment Batch Eligibility Response Process**

Two hours after transferring the batch ASC X12 v5010 270 Interchange to the health plan's Internet portal, the provider's PMS/HIS establishes a communications session with each health plan's system, requests either a list of available files for retrieval or specific file(s). Specific file(s) may be either an ASC X12 v5010 999 or an ASC X12 v5010 271 Interchange or any combination of these. The health plan's Internet portal responds appropriately to the provider's PMS/HIS request. The provider's PMS/HIS then retrieves the requested and/or available file(s), records the message receipt date/time, assigns internal tracking number(s) to the message and retrieved file(s) linked to

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

the ASC X12 Interchange(s), and matches the tracking number, message receipt date/time to the corresponding ASC X12 v5010 270 Interchange. The PMS/HIS then processes (validates) the ASC X12 Interchange(s) retrieved.

If the batch ASC X12 v5010 271 Interchange fails ASC X12 TR3 implementation guide verification, the PMS/HIS generates an ASC X12 v5010 999 rejection interchange, establishes a communication session with the appropriate health plan's Internet portal and transfers the ASC X12 v5010 999 interchange to the health plan. The PMS/HIS also generates a notice to the provider's appropriate internal support staff for problem resolution following established internal procedures.

If the ASC X12 v5010 271 Interchange passes (with or without errors) ASC X12 v5010 TR3 implementation guide verification, the PMS/HIS extracts the eligibility response data from the v5010 271 transaction set, creates the required internal eligibility response transaction(s) which are routed to the correct workstation for analysis and processing by the designated support staff.

If the v5010 271 eligibility response transaction indicates the inquiry was rejected or that the benefit coverage or status has changed from the earlier inquiry, the PMS/HIS displays the new information, enabling the support staff to contact the patient prior to the appointment/admission to resolve the variances by obtaining corrected data. The PMS/HIS then resubmits the corrected eligibility inquiry.

If the v5010 271 eligibility response transaction contains the requested benefit coverage, benefit status, and patient financial responsibility information, the PMS/HIS displays the benefit information, enabling the support staff to re-confirm the appointment/admission with the patient in advance and remind the patient of any information to bring to the appointment/admission and of any payment responsibilities.

## **2.3 PROVIDER DIRECT-TO-HEALTH PLAN BUSINESS MODEL**

### **2.3.1 Introduction**

This CORE Master Business Process Scenario describes both the real time and batch business processes for end-to-end insurance verification/eligibility inquiries using business language, not technical specifications to the extent appropriate, in which the healthcare provider submits inquiries directly to the health plan or information source without using the services of a clearinghouse or other intermediary. Since the overall business process for insurance verification/eligibility inquiry does not fundamentally change from a business viewpoint, each Phase I and Phase II CORE rule addresses a critical interoperability activity/task within the common business process. Thus, the focus for this scenario is on the EDI aspects of the overall end-to-end business process and not on attempting to describe all of the activities and tasks typically performed by each of the stakeholders in the process.

### **2.3.2 Background**

This scenario describes the healthcare insurance verification/eligibility end-to-end business process and the key activities and tasks conducted between a healthcare provider connecting directly to a health plan. For purposes of Phase II CORE Certification Testing, stakeholders include providers, health plans, clearinghouses, switches, other intermediaries, and solution vendors.

Each stakeholder type is equipped with an automated system (the "system") appropriate to its needs, e.g., a provider would have a hospital (or health) information system, commonly referred to as an HIS, or an automated practice management system (the "system"), commonly referred to as a PMS.

The "system" is defined as all of the components necessary for the stakeholder to conduct its automated business processes, e.g., all necessary network nodes, all platform components delivered by the vendor, and all the vendor components (e.g. documentation) included with the system. The system may consist of one or many workstations,

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

servers and mainframe systems, and may include capture patient registration information at the point of patient intake (or scheduling) at the workstation if the stakeholder is a provider.

**2.3.3 Eligibility Business Process Description**

**2.3.3.1 Appointment Scheduling Process**

An appointment scheduler at the provider's office is scheduling an appointment for either an office visit or admission (depending on the type of provider) for a patient in 2 weeks while on the phone with the patient. The scheduler inquires about the reason for the appointment, collects data from the patient following prompts on the workstation and enters all of the necessary information into the PMS/HIS.

When all of the necessary patient demographic and insurance information is entered, the scheduler is prompted to submit an insurance verification transaction by either a menu selection or by clicking an icon (as determined by the PMS/HIS vendor user interface design).

The PMS/HIS automatically edits the eligibility transaction for completeness and valid data values where applicable and prompts the scheduler to correct any invalid or omitted data. When the transaction editing is completed, the PMS/HIS assigns a unique internal tracking number, records the identification and address of the workstation used by the scheduler, and creates the eligibility inquiry transaction.

Using internal tables/files and/or an external directory service, the PMS/HIS determines the Internet address for the health plan identified by the patient, creates and envelopes the complete ASC X12 Interchange containing the v5010 270 inquiry, creates the HTTP/S message, assigns a payload identifier, records the date/time, links the message to the ASC X12 v5010 270 Interchange, and establishes a communications session with the health plan's system.

**2.3.3.2 Health Plan Real Time Eligibility Inquiry Process**

The health plan's Internet portal accepts the provider's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC X12 v5010 270 Interchange, which is then extracted and passed to the health plan's EDI management system for further processing. The health plan's EDI management system, processes (validates) the ASC X12 v5010 270 Interchange.

If the ASC X12 v5010 270 Interchange fails ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the v5010 999 Implementation Acknowledgement indicating the rejection of the Functional Group, returns the rejection acknowledgement to the provider, terminates the communications session and discontinues any further processing of the inquiry transaction.

If the ASC X12 v5010 270 Interchange passes (with or without errors) ASC X12 v5010 TR3 implementation guide verification, the EDI management system extracts the eligibility inquiry data from the v5010 270 transaction set, creates the required internal inquiry transaction which is routed to the eligibility system for processing. The eligibility system accesses all of the necessary internal data stores (files, databases, etc.) to process the eligibility inquiry to determine the benefits and status of coverage for the individual identified in the inquiry. The data is then assembled and routed to the health plan's EDI management system.

The EDI management system edits the eligibility response data for correctness and completeness, creates the ASC X12 Interchange containing the v5010 271 eligibility response, passes the ASC X12 v5010 271 Interchange to the open communications session which returns the ASC X12 v5010 271 Interchange to the provider's PMS/HIS. The health plan's Internet portal then terminates the communications session upon successful transfer of the ASC X12 v5010 271 Interchange to the provider's system. The ASC X12 v5010 271 Interchange may contain either a v5010 271 with AAA Validation Request Validation Request rejection/error codes or a v5010 271 with the requested benefit data.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

**2.3.3.3 Provider's Real Time Eligibility Response Process**

The provider's PMS/HIS receives the ASC X12 v5010 271 Interchange from the health plan, records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC X12 v5010 271 Interchange, and matches the tracking number, message receipt date/time to the corresponding ASC X12 v5010 270 Interchange. The PMS/HIS then processes (validates) the ASC X12 v5010 271 Interchange.

If the ASC X12 v5010 271 Interchange fails ASC X12 TR3 implementation guide verification, the PMS/HIS generates a notice to the provider's appropriate internal support staff for problem resolution following established internal procedures. No rejection acknowledgement is returned to the health plan.

If the ASC X12 v5010 271 Interchange passes (with or without errors) ASC X12 v5010 TR3 implementation guide verification, the PMS/HIS extracts the eligibility response data from the v5010 271 transaction set, creates the required internal eligibility response transaction which is routed to the correct workstation for display to the scheduler.

If the v5010 271 eligibility response transaction indicates the inquiry was rejected, the PMS/HIS displays the reasons for such rejection, enabling the scheduler to resolve the rejection by obtaining corrected data as indicated from the patient during the initial appointment/admission scheduling phone call. The PMS/HIS then resubmits the corrected eligibility inquiry.

If the v5010 271 eligibility response transaction contains the requested benefit coverage, benefit status, and patient financial responsibility information, the PMS/HIS displays the benefit information, enabling the scheduler to confirm the benefit coverage and status with the patient and to inform the patient of any co-pay, co-insurance, or deductible amounts during the initial appointment/admission scheduling phone call.

The provider's scheduler then confirms the date and time of the appointment/admission with the patient, reminds the patient of any information required at the time of the appointment/admission and concludes the phone call with the patient.

**2.3.3.4 Provider's Pre-Appointment Batch Eligibility Process**

On a daily basis the provider's PMS/HIS automatically scans all scheduled appointments/admissions for two days in advance of the current date, extracts all of the necessary data, creates one or more batches of eligibility inquiries for each health plan covering the patient appointments/admissions for that date, assigns unique internal tracking numbers and records the date/time for each batch.

Using internal tables/files and/or an external directory service, the PMS/HIS determines the Internet address for each health plan, envelopes the complete ASC X12 Interchange containing the batch of v5010 270 inquiries for each health plan, creates the HTTP/S message, assigns a payload identifier, records the date/time, links the message to the correct batch ASC X12 v5010 270 Interchange, establishes a communications session with each health plan's system and transfers the batch ASC X12 v5010 270 Interchange to the health plan.

**2.3.3.5 Health Plan Batch Eligibility Inquiry Process**

The health plan's Internet portal accepts the provider's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the batch ASC X12 v5010 270 Interchange, which is then extracted and passed to the health plan's EDI management system for further processing. The health plan's Internet portal returns the correct HTTP message accepted code to the provider's PMS/HIS and terminates the communications session.

The health plan's EDI management system, processes (validates) the batch ASC X12 v5010 270 Interchange. If the batch ASC X12 v5010 270 Interchange fails ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the v5010 999 Implementation Acknowledgement indicating the rejection of

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

the Functional Group, stages the rejection acknowledgement for subsequent retrieval by the provider's PMS/HIS, and discontinues any further processing of the batch ASC X12 v5010 270 Interchange.

If the batch ASC X12 v5010 270 Interchange passes (with or without errors) ASC X12 v5010 TR3 implementation guide verification, the EDI management system automatically generates the v5010 999 Implementation Acknowledgement indicating the acceptance of the ASC X12 v5010 270 Functional Group, and stages the acceptance acknowledgement for subsequent retrieval by the provider's PMS/HIS.

The EDI management system extracts the eligibility inquiry data from the v5010 270 transaction set, creates the required internal inquiry transaction(s) which are routed to the eligibility system for processing. The eligibility system accesses all of the necessary internal data stores (files, databases, etc.) to process the eligibility inquiries to determine the benefits and status of coverage for each of the individuals identified in the inquiries. The data is then assembled and routed to the health plan's EDI management system.

The EDI management system edits the eligibility response data for correctness and completeness, creates the batch(es) ASC X12 Interchange containing the v5010 271 eligibility responses, stages the batch(es) ASC X12 v5010 271 Interchange for subsequent retrieval by the provider's PMS/HIS.

**2.3.3.6 Provider's Pre-Appointment Batch Eligibility Response Process**

Two hours after transferring the batch ASC X12 v5010 270 Interchange to the health plan's Internet portal, the provider's PMS/HIS establishes a communications session with each health plan's system, requests either a list of available files for retrieval or specific file(s). Specific file(s) may be either an ASC X12 v5010 999 an ASC X12 v5010 271 Interchange or any combination of these. The health plan's Internet portal responds appropriately to the provider's PMS/HIS request. The provider's PMS/HIS then retrieves the requested and/or available file(s), records the message receipt date/time, assigns internal tracking number(s) to the message and retrieved file(s) linked to the ASC X12 Interchange(s), and matches the tracking number, message receipt date/time to the corresponding ASC X12 v5010 270 Interchange. The PMS/HIS then processes (validates) the ASC X12 Interchange(s) retrieved.

If the batch ASC X12 v5010 271 Interchange fails ASC X12 TR3 implementation guide verification, the PMS/HIS generates an ASC X12 v5010 999 rejection interchange, establishes a communication session with the appropriate health plan's Internet portal and transfers the ASC X12 v5010 999 interchange to the health plan. The PMS/HIS also generates a notice to the provider's appropriate internal support staff for problem resolution following established internal procedures.

If the ASC X12 v5010 271 Interchange passes (with or without errors) ASC X12 v5010 TR3 implementation guide verification, the PMS/HIS extracts the eligibility response data from the v5010 271 transaction set, creates the required internal eligibility response transaction(s) which are routed to the correct workstation for analysis and processing by the designated support staff.

If the v5010 271 eligibility response transaction indicates the inquiry was rejected or that the benefit coverage or status has changed from the earlier inquiry, the PMS/HIS displays the new information, enabling the support staff to contact the patient prior to the appointment/admission to resolve the variances by obtaining corrected data. The PMS/HIS then resubmits the corrected eligibility inquiry.

If the v5010 271 eligibility response transaction contains the requested benefit coverage, benefit status, and patient financial responsibility information, the PMS/HIS displays the benefit information, enabling the support staff to re-confirm the appointment/admission with the patient in advance and remind the patient of any information to bring to the appointment/admission and of any payment responsibilities.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

## **2.4 CLAIM STATUS MASTER SCENARIOS**

### **2.4.1 Purpose and Use of the Phase II CORE Master Claim Status Request Business Process Scenarios**

#### **2.4.1.1 Purpose of the Business Process Scenarios**

For Phase I, CORE developed Business Process Scenarios for the eligibility transaction when used in batch and real-time modes. The same approach is being used with the claims status request transactions in developing the Phase II CORE Operating Rules. The business process scenarios described for claims status request for real-time and batch depict the workflows and information flows that support an efficient management process for health plans and providers. The Phase II CORE operating rules for claim status request are designed to support these business processes and their technical components. Creation of Phase II CORE claims status request operating rules should promote increased health plan service level performance, stimulate vendors to enhance their products to support claims status request management and encourage providers to utilize these transactions.

These scenarios serve several purposes, including identifying and confirming the placement in the workflow in the provider setting and health plan setting where the following transformations occur:

- Collecting the information to initiate claim status request in the provider's workplace and identifying the individual or role where this takes place.
- The system or mechanism used to create and manage the EDI interchange outbound and inbound from the provider.
- Identify the work and information flows at the health plan upon receiving and validating the claims request transaction.
- Describe the information process at the health plan, including files and databases to be used to collect the information and prepare the response to the claims status request.
- The process to prepare and send the claims status response EDI transaction from the health plan.
- The process at the provider of receiving the claims status response EDI transaction and preparing it for use.
- The identification of the information presentation(s) used at the provider organization to process the information in the claims status response to be used in determining what action to take and by whom within the organization.

It is important to understand each of these touch points as well as the role of one or more clearinghouses between the two trading partners in order to develop the details of the rules, the CORE certification and testing process, the test data, and as a guide toward implementation for the parties involved.

The business processes are vendor neutral, with an understanding that the details about how the work processes are conducted within information systems and are used by members of the workforce will vary depending on the vendor products utilized. Note that in some cases, a provider's clearinghouse may provide some of the functionality described as a provider role in these scenarios. That is a business decision to be made between the provider and its clearinghouse. Likewise, the health plan's clearinghouse may provide some of the functional capabilities for the health plan. Again, this is a business decision between the health plan and the health plan's clearinghouse.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

**2.4.1.2 Current and Future Workflow and Information Flow Processes**

Currently in many settings, claims status request process is not well integrated into the business processes of healthcare providers. As a result, many providers are not realizing the benefits of administrative simplification through an automated workflow and process for claim status inquiries. For those providers already using the claim status request transactions, the Phase II CORE Operating Rule improve performance with a greater availability of health plan systems and more consistent/predictable response times to receive claim status request responses. Some providers ignore the process and resubmit claims when they are not adjudicated within a normal or expected timeframe. Other providers ignore the claims status request function and trust that the health plan has received their claim and that eventually it will be adjudicated. Some providers call health plans with their inquiries about claim status. None of these approaches are designed to provide an efficient, integrated business process for providers and health plans to exchange information on the status of claims that are “overdue.”

In some cases, there are vendor products with management tools to support an automated claims status request. However, most vendor products (practice management systems and hospital information systems) either do not have management tools to efficiently support this process, or providers choose not to use them or license them when they do exist. Instead, telephone calls and resubmitted overdue claims are commonly used, both of which consume resources for both the provider and the health plan.

**2.4.2 Single/Dual Clearinghouse Provider-to-Health Plan Business Model**

**2.4.2.1 Introduction**

This CORE Master Business Process Scenario describes real time and batch business processes for end-to-end insurance claim status inquiries using business language, not technical specifications to the extent appropriate, in which there are either one or two clearinghouses providing services to the healthcare provider and health plan or information source. Since the overall business process for insurance claim status request does not fundamentally change from a business viewpoint, each Phase II CORE rule addresses a critical interoperability activity/task within the common business process. Thus, the focus for this scenario is on the EDI aspects of the overall end-to-end business process and not on attempting to describe all of the activities and tasks typically performed by each of the stakeholders in the process.

**2.4.2.2 Background**

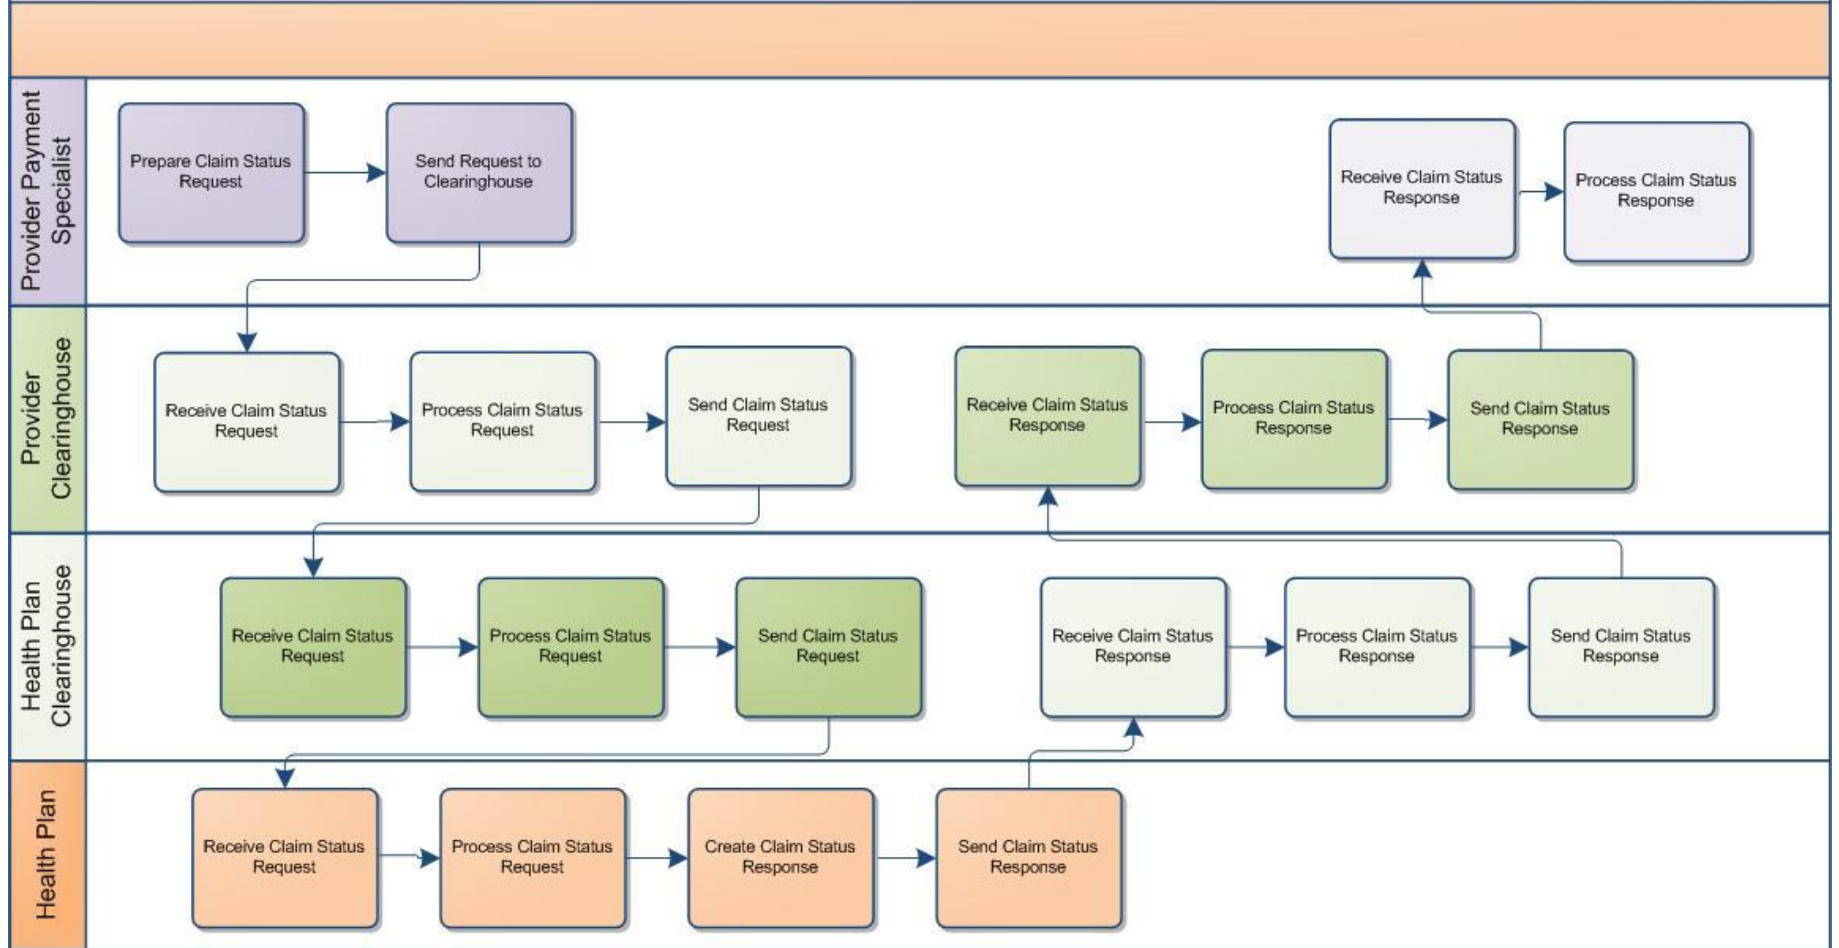

This scenario describes the healthcare insurance claim status request end-to-end business process and the key activities and tasks conducted between a healthcare provider and a health plan where each party uses the services of a healthcare clearinghouse. For purposes of Phase II CORE certification testing, stakeholders include providers, health plans, clearinghouses, switches, other intermediaries, and solution vendors. The end-to-end information flow is the same whether the claim status request is conducted in real time or batch. It is the Phase II CORE rules that specify the respective response times for real time and for batch processing modes. Figure 1 below depicts this overall information flow.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

**Figure 1: Claim Status Process: Single/Dual Clearinghouse Provider-to-Health Plan Model**

*Real-Time Process: 20 seconds total response time with Phase II CORE Rules*  
*Batch Process: next business day total response time with Phase II CORE Rules*

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

Each stakeholder type is equipped with an automated system (the “system”) appropriate to its needs, e.g., a provider would have a hospital (or health) information system, commonly referred to as an HIS, or an automated practice management system (the “system”), commonly referred to as a PMS.

The “system” is defined as all of the components necessary for the stakeholder to conduct its automated business processes, e.g., all necessary network nodes, all platform components delivered by the vendor, and all the vendor components (e.g. documentation) included with the system. The system may consist of one or many workstations, servers and mainframe systems, and usually supports payment collection in the business office at the workstation if the stakeholder is a provider.

**2.4.2.3 Claim Status Request Business Process Description**

*2.4.2.3.1 Business Office Claim Payment Management*

A business office insurance payment specialist at the provider’s office is inquiring about a claim that has been submitted, for which the status of adjudication is unknown. The business office insurance payment specialist collects the required data from the “system”, following prompts on the workstation and enters all of the necessary information into the PMS/HIS. In some systems, the request may be initiated automatically based on a past due expected date for adjudication reporting.

When all of the necessary patient demographic and insurance information is entered, the payment specialist is prompted to submit a claim status request transaction by either a menu selection or by clicking an icon (as determined by the PMS/HIS vendor user interface design).

The PMS/HIS automatically edits the claim status transaction for completeness and valid data values where applicable and prompts the payment specialist to correct any invalid or omitted data. When the transaction editing is completed, the PMS/HIS assigns a unique internal tracking number, records the identification and address of the workstation used by the payment specialist, and creates the claim status request transaction.

Using internal tables/files, the PMS/HIS determines the Internet address for its clearinghouse, creates the message encapsulation envelope, assigns a payload identifier, records the date/time, links the message to the claim status request transaction, and establishes a communications session with the clearinghouse’s system. The claim status request transaction created by the PMS/HIS for transfer to its clearinghouse/switch may be either in a proprietary format or a fully enveloped ASC X12 Interchange containing the v5010 276 claim status request transaction set.

*2.4.2.3.2 Provider Clearinghouse Real Time Claim Status Request Process*

The clearinghouse’s Internet portal accepts the provider’s system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the claim status request transaction, which is then extracted and passed to the appropriate systems in the clearinghouse for further processing. The clearinghouse’s system edits the claim status transaction for completeness and valid data values where applicable. If the claim status transaction fails editing, the clearinghouse returns to the provider an appropriate error message or acknowledgement describing the reasons for failure and rejection, thereby allowing the provider to correct and re-submit the claim status transaction. Such error message or acknowledgement may be either a proprietary or valid ASC X12 Acknowledgement, depending on the type and range of services the clearinghouse is providing.

Using internal tables/files and/or an external directory service, the clearinghouse system determines the Internet address for the clearinghouse serving the health plan specified in the provider’s claim status request transaction, creates and envelopes the complete ASC X12 Interchange containing the v5010 276 request, creates the message encapsulation envelope, assigns a payload identifier, records the date/time, links the message to the ASC v5010 X12 276 Interchange, and establishes a communications session with the health plan’s clearinghouse. Depending on the range and type of services being provided to the provider by the clearinghouse, the clearinghouse may or may not have responsibility for creating the correct ASC X12 Interchange containing the v5010 276 Claim status request or for performing other data validation/transformation and/or editing functions prior to forwarding the claim status request to either the health plan or the health plan’s clearinghouse. Upon

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

successful transfer of the ASC v5010 X12/276 Interchange to the health plan's clearinghouse, the provider's clearinghouse maintains the communications session open and active until receipt of either a ASC v5010 X12 999 or ASC v5010 X12 277 Interchange from the health plan's clearinghouse.<sup>3</sup>

If the ASC v5010 X12 276 Interchange fails ASC X12 TR3 implementation guide verification at the health plan's clearinghouse, the provider's clearinghouse receives the ASC v5010 X12/999 Implementation Acknowledgement indicating the rejection of the Functional Group, extracts/reformats the rejection acknowledgement and takes appropriate action to resolve the rejection. This may be by returning it to the provider's PMS/HIS or correcting the errors within the clearinghouse.

When the ASC v5010 X12 277 claim status response transaction is received from the health plan's clearinghouse, the clearinghouse's Internet portal records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC v5010 X12 277 Interchange, returns a signal to the health plan's clearinghouse that the ASC v5010 X12 277 Interchange payload has been successfully stored into persistent storage, and passes the ASC v5010 X12 277 Interchange to the clearinghouse's EDI management system for further processing. The clearinghouse's EDI management system processes (validates) the ASC v5010 X12 277 Interchange which contains the requested claim status data. The EDI management system extracts the v5010 277 response data, creates the required claim status response transaction required by the provider's PMS/HIS (may be either a proprietary or valid ASC v5010 X12 277 Interchange), and transfers the claim status response transaction to the provider's PMS/HIS.

*2.4.2.3.3 Health Plan Clearinghouse Real Time Claim Status Request Process*

The health plan's clearinghouse Internet portal accepts the provider's clearinghouse's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC v5010 X12 276 Interchange, returns a signal to the provider's clearinghouse that the ASC v5010 X12 276 Interchange payload has been successfully stored into persistent storage, and passes the ASC v5010 X12 276 Interchange to the clearinghouse's EDI management system for further processing. The clearinghouse's EDI management system, processes (validates) the ASC v5010 X12 276 Interchange.

If the ASC v5010 X12 276 Interchange passes (with or without errors) ASC X12 TR3 implementation guide verification, the EDI management system extracts the claim status request data from the v5010 276 transaction set, creates the required internal claim status request transaction required by the health plan. Using internal tables/files and/or an external directory service, the clearinghouse system determines the Internet address for the health plan specified in the provider's claim status request transaction, creates the message encapsulation envelope, assigns a payload identifier, records the date/time, links the message to the claim status request transaction, and establishes a communications session with the health plan if such a communications link is not already open and active. Upon successful transfer of the claim status request transaction to the health plan, the clearinghouse maintains the communication session open and active pending receipt of the claim status response transaction from the health plan.

---

<sup>3</sup> Alternatively, a single clearinghouse may be serving both the provider and the health plan to which the claims status request transaction is to be transmitted. In this case, the single clearinghouse would not only perform the reformatting of non-standard data and non-standard format received from the provider into the HIPAA-adopted standard, but would then perform the reformatting of the standard data and standard format into non-standard data and non-standard format required by the health plan. A similar set of functions would be performed when processing the claims status response transaction received from the health plan. See Health Plan Clearinghouse Real Time Claim Status Request Process section in this document for a complete description of this process.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

If the v5010 X12 276 Interchange fails ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the ASC v5010 X12 999 Implementation Acknowledgement indicating the rejection of the Functional Group, returns the rejection acknowledgement to the provider's clearinghouse, terminates the communications session (if necessary) and discontinues any further processing of the claim status request transaction.

When the claim status response transaction is received from the health plan, the clearinghouse's EDI management system edits the claim status response data for correctness and completeness, creates the ASC X12 Interchange containing the v5010 277 claim status response, passes the ASC v5010 X12 277 Interchange to the open communications session which returns the ASC v5010 X12 277 Interchange to the provider's clearinghouse.

*2.4.2.3.4 Health Plan Real Time Claim Status Request Process*

The health plan's Internet portal accepts the clearinghouse's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the claim status request transaction, which is then extracted and passed to the health plan's claim status request system for processing. The claim status system accesses all of the necessary internal data stores (files, databases, etc.) to process the claim status request transaction to determine the status of the claim identified in the request. The data are then assembled and routed to the health plan's clearinghouse. When the clearinghouse signals successful receipt of the claim status response transaction to the health plan's system, the communications session may be terminated or maintained open and active as determined between the health plan and its clearinghouse.

*2.4.2.3.5 Provider Real Time Claim Status Response Process*

The provider's PMS/HIS receives the claim status response transaction from its clearinghouse, records the message receipt date/time, assigns an internal tracking number to the message linked to the claim status response transaction, and matches the tracking number, message receipt date/time to the corresponding claim status request transaction. The PMS/HIS then processes (validates) the claim status response transaction, which is routed to the correct workstation for display to the payment specialist.

The PMS/HIS displays the claim status information, enabling the payment specialist to take appropriate action by obtaining corrected claim data as indicated from the PMS/HIS or other sources and either resubmitting a corrected claim status request or a corrected claim.

If the claim status response transaction contains the requested information, the PMS/HIS displays the claim status information, enabling the payment specialist to confirm the claim status. Status of the claim within the health plan's adjudication process may include pre-adjudication acceptance/rejection, incorrect or incomplete claim pending, claim suspended/additional information is being requested, or claim finalized. Subsequent activities may include calling the patient or health plan, or pending further action to a later date. The claim status information as represented by the status and category codes received in the v5010 271 response and the date of the request are stored in the PMS/HIS.

*2.4.2.3.6 Provider Batch Claim Status Process*

On a daily basis the provider's PMS/HIS automatically scans all past due claim adjudication responses for the current date, extracts all of the necessary data, creates one or more batches of claim status inquiries for each health plan covering the overdue adjudication responses for that date, assigns unique internal tracking numbers and records the date/time for each batch.

Using internal tables/files and/or an external directory service, the PMS/HIS determines the Internet address for each health plan, envelopes the complete ASC X12 Interchange containing the batch of v5010 276 inquiries for each health plan, creates the message encapsulation envelope, assigns a payload identifier, records the date/time, links the message to the correct batch ASC v5010 X12 276 Interchange, establishes a communications session with each health plan's system and transfers the batch of claim status request transactions in either a proprietary non-standard format or ASC v5010 X12 276 Interchange to its clearinghouse for transmission to the health plan's clearinghouse prior to 9:00 pm ET, the daily cut-off time for batch submissions.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

*2.4.2.3.7 Provider Clearinghouse Batch Claim Status Request Process*

The clearinghouse's Internet portal accepts the provider's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the claim status request transaction, which is then extracted and passed to the appropriate systems in the clearinghouse for further processing. The clearinghouse's system edits the claim status transaction for completeness and valid data values where applicable. If the claim status transaction fails editing, the clearinghouse returns to the provider an appropriate error message or acknowledgement describing the reasons for failure and rejection, thereby allowing the provider to correct and re-submit the claim status transaction. Such error message or acknowledgement may be either a proprietary or valid ASC X12 Acknowledgement, depending on the type and range of services the clearinghouse is providing.

Using internal tables/files and/or an external directory service, the clearinghouse system determines the Internet address for the clearinghouse serving the health plan specified in the provider's claim status request transaction, creates and envelopes the complete ASC X12 Interchange containing the v5010 276 request, creates the message encapsulation envelope, assigns a payload identifier, records the date/time, links the message to the ASC v5010 X12 276 Interchange, and establishes a communications session with the health plan's clearinghouse. Depending on the range and type of services being provided to the provider by the clearinghouse, the clearinghouse may or may not have responsibility for creating the correct ASC X12 Interchange containing the v5010 276 Claim Status Request or for performing other data validation/transformation and/or editing functions prior to forwarding the claim status request to either the health plan or the health plan's clearinghouse. Upon successful transfer of the ASC v5010 X12/276 Interchange to the health plan's clearinghouse, the provider's clearinghouse either terminates the session (if necessary) or maintains the communications session open and active until receipt of either a ASC v5010 X12 999 or ASC v5010 X12 277 Interchange from the health plan's clearinghouse.<sup>4</sup>

If the ASC v5010 X12 276 Interchange fails ASC X12 TR3 implementation guide verification at the health plan's clearinghouse, the provider's clearinghouse receives the ASC v5010 X12 999 Implementation Acknowledgement indicating the rejection of the Functional Group, extracts/reformats the rejection acknowledgement and takes appropriate action to resolve the rejection. This may be by returning it to the provider's PMS/HIS or correcting the errors within the clearinghouse.

When the ASC v5010 X12 277 claim status response transaction is received from the health plan's clearinghouse, the clearinghouse's Internet portal records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC v5010 X12 277 Interchange, returns a signal to the health plan's clearinghouse that the ASC v5010 X12 277 Interchange payload has been successfully stored into persistent storage, and passes the ASC v5010 X12 277 Interchange to the clearinghouse's EDI management system for further processing. The clearinghouse's EDI management system processes (validates) the ASC v5010 X12 277 Interchange which contains the requested claim status data. The EDI management system extracts the v5010 277 response data, creates the required claim status response transaction required by the provider's PMS/HIS (may be either a proprietary or valid ASC v5010 X12 277 Interchange), and transfers the claim status response transaction to the provider's PMS/HIS.

---

<sup>4</sup> *Alternatively, a single clearinghouse may be serving both the provider and the health plan to which the claims status request transaction is to be transmitted. In this case, the single clearinghouse would not only perform the reformatting of non-standard data and non-standard format received from the provider into the HIPAA-adopted standard, but would then perform the reformatting of the standard data and standard format into non-standard data and non-standard format required by the health plan. A similar set of functions would be performed when processing the claims status response transaction received from the health plan. See Health Plan Clearinghouse Real Time Claim Status Request Process section in this document for a complete description of this process.*

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

*2.4.2.3.8 Health Plan Clearinghouse Batch Claim Status Request Process*

The health plan's clearinghouse Internet portal accepts the provider's clearinghouse's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC v5010 X12 276 Interchange, returns a signal to the provider's clearinghouse that the ASC v5010 X12 276 Interchange payload has been successfully stored into persistent storage, and passes the ASC v5010 X12 276 Interchange to the clearinghouse's EDI management system for further processing. The clearinghouse's EDI management system, processes (validates) the ASC v5010 X12 276 Interchange.

If the ASC v5010 X12 276 Interchange passes (with or without errors) ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the ASC v5010 X12 999 Implementation Acknowledgement indicating acceptance of the ASC v5010 X12 276 Interchange, returns the ASC v5010 X12 999 Interchange to the provider's clearinghouse, extracts the claim status request data from the v5010 276 transaction set, and creates the required internal claim status request transactions required by the health plan.

Using internal tables/files and/or an external directory service, the clearinghouse system determines the Internet address for the health plan specified in the provider's claim status request transaction, creates the message encapsulation envelope, assigns a payload identifier, records the date/time, links the message to the claim status request transaction, and establishes a communications session with the health plan if such a communications link is not already open and active. Upon successful transfer of the claim status request transactions to the health plan, the clearinghouse either terminates (if necessary) or maintains the communication session open and active pending receipt of the claim status response transactions from the health plan.

If the v5010 X12 276 Interchange fails ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the ASC v5010 X12 999 Implementation Acknowledgement indicating the rejection of the Functional Group, returns the rejection acknowledgement to the provider's clearinghouse, terminates the communications session (if necessary) and discontinues any further processing of the request transaction.

When the claim status response transactions are received from the health plan, the clearinghouse's EDI management system edits the claim status response data for correctness and completeness, creates the ASC X12 Interchange containing the v5010 277 claim status responses, passes (with or without errors) the ASC v5010 X12 277 Interchange to the communications module which returns the ASC v5010 X12 277 Interchange to the provider's clearinghouse. The clearinghouse's EDI management system processes (validates) the ASC v5010 X12 277 Interchange which contains the requested claim status data.

*2.4.2.3.9 Health Plan Batch Claim Status Request Process*

The health plan's Internet portal accepts the provider's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the batch ASC v5010 X12 276 Interchange, which is then extracted and passed to the health plan's EDI management system for further processing. The health plan's Internet portal returns the correct HTTP message accepted code to the provider's PMS/HIS and terminates the communications session.

The health plan's EDI management system, processes (validates) the batch ASC v5010 X12 276 Interchange. If the batch ASC v5010 X12 276 Interchange fails ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the ASC v5010 X12 999 Implementation Acknowledgement indicating the rejection of the Functional Group, stages the acknowledgement for subsequent retrieval by the provider's clearinghouse, and discontinues any further processing of the batch ASC v5010 X12 276 Interchange.

If the batch v5010 X12 276 Interchange passes (with or without errors) ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the ASC v5010 X12 999 Implementation Acknowledgement indicating the acceptance of the v5010 X12 276 Functional Group, and stages the acknowledgement for subsequent retrieval by the provider's PMS/HIS.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

The EDI management system extracts the claim status request data from the v5010 276 transaction set, creates the required internal request transaction(s) which are routed to the claim status system for processing. The claim status system accesses all of the necessary internal data stores (files, databases, etc.) to process the claim status inquiries to determine the claim status for each of the inquiries. The data are then assembled and routed to the health plan's EDI management system.

The EDI management system edits the claim status response data for correctness and completeness, creates the batch(es) ASC X12 Interchange containing the v5010 277 claim status responses, stages the batch(es) ASC v5010 X12 277 Interchange for subsequent retrieval by the provider's PMS/HIS.

*2.4.2.3.10 Provider's Batch Claim Status Response Process*

Two hours after transferring the batch ASC v5010 X12 276 Interchange to its clearinghouse, the provider's PMS/HIS establishes a communications session with its clearinghouse, requests either a list of available files for retrieval or specific file(s). Specific file(s) may be either an ASC v5010 X12 999 Interchange, or an ASC v5010 X12 277 Interchange or any combination of these. The clearinghouse responds appropriately to the provider's PMS/HIS request. The provider's PMS/HIS then retrieves the requested and/or available file(s), records the message receipt date/time, assigns internal tracking number(s) to the message and retrieved file(s) linked to the ASC X12 Interchange(s), and matches the tracking number, message receipt date/time to the corresponding ASC v5010 X12 276 Interchange. The PMS/HIS then processes (validates) the ASC X12 Interchange(s) retrieved.

If the batch ASC v5010 X12 277 Interchange fails ASC X12 TR3 implementation guide verification, the PMS/HIS generates the ASC v5010 X12 999 Implementation Acknowledgement, establishes a communication session with the clearinghouse and transfers the ASC v5010 X12 999 to the clearinghouse. The PMS/HIS also generates a notice to the provider's appropriate internal support staff for any problem resolution following established internal procedures.

The PMS/HIS extracts the claim status response data from the v5010 277 transaction set, creates the required internal claim status response transaction(s) which are routed to the correct workstation for analysis and processing by the designated support staff.

The PMS/HIS displays the claim status information, enabling the payment specialist to take appropriate action by obtaining corrected claim data as indicated from the PMS/HIS or other sources and either resubmitting a corrected claim status request or a corrected claim.

If the v5010 277 claim status response transaction contains the requested claim status information, the PMS/HIS displays the information, enabling the payment specialist staff to extend the expected adjudication date, contact the patient, or contact the health plan by telephone, fax or other means to resolve problems associated with completing adjudication.

**2.4.3 Provider Direct-to-Health Plan Business Model**

**2.4.3.1 Introduction**

This CORE Master Business Process Scenario describes real time and batch business processes for end-to-end insurance verification/claim status inquiries using business language, not technical specifications to the extent appropriate, in which the healthcare provider submits inquiries directly to the health plan or information source without using the services of a clearinghouse or other intermediary. Since the overall business process for insurance verification/claim status request does not fundamentally change from a business viewpoint, each Phase II CORE rule addresses a critical interoperability activity/task within the common business process. Thus, the focus for this scenario is on the EDI aspects of the overall end-to-end business process and not on attempting to describe all of the activities and tasks typically performed by each of the stakeholders in the process.

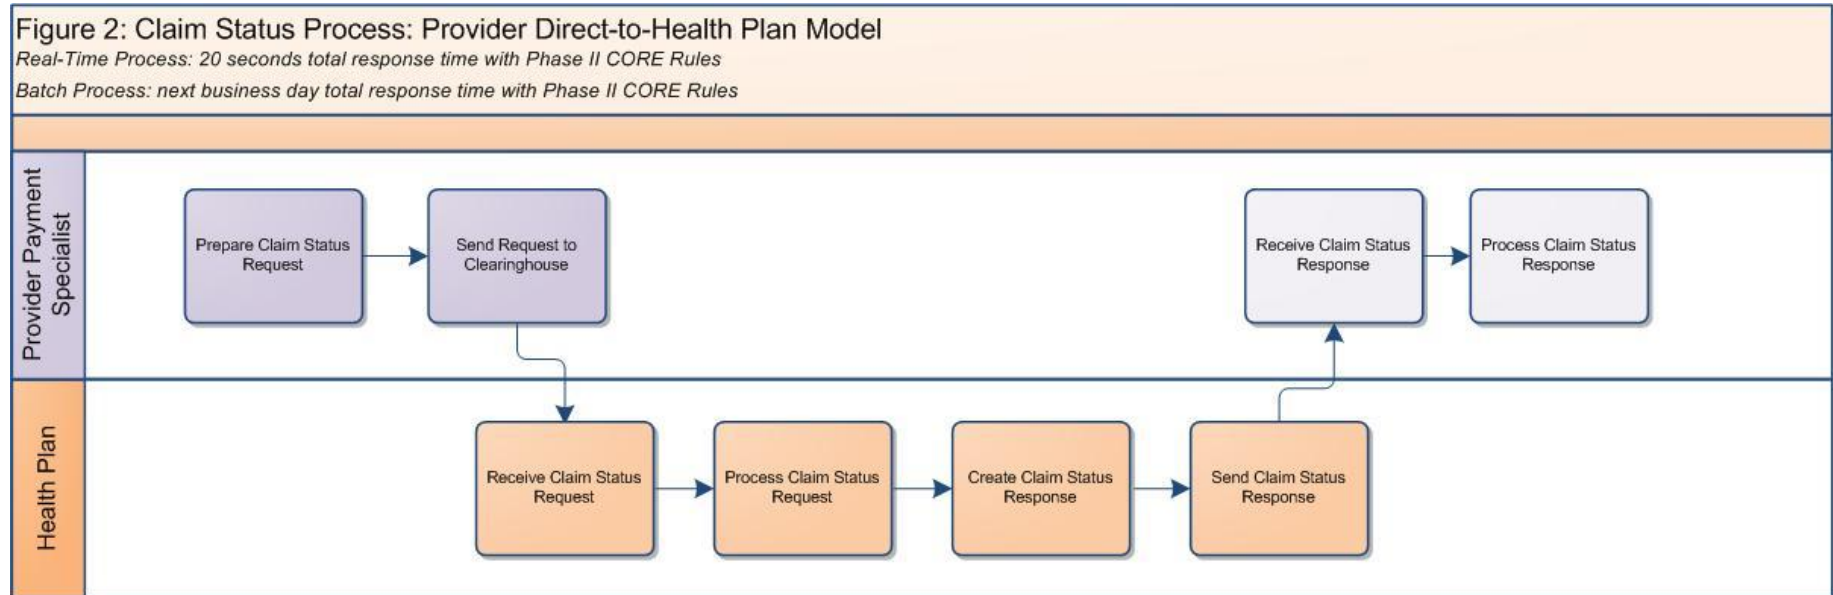

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

**2.4.3.2 Background**

This scenario describes the healthcare insurance verification/claim status end-to-end business process and the key activities and tasks conducted between a healthcare provider connecting directly to a health plan. For purposes of Phase II CORE Certification Testing for this scenario, stakeholders include providers, health plans and solution vendors.

Each stakeholder type is equipped with an automated system (the “system”) appropriate to its needs, e.g., a provider would have a hospital (or health) information system, commonly referred to as a HIS, or an automated practice management system (the “system”), commonly referred to as a PMS.

The “system” is defined as all of the components necessary for the stakeholder to conduct its automated business processes, e.g., all necessary network nodes, all platform components delivered by the vendor, and all the vendor components (e.g. documentation) included with the system. The system may consist of one or many workstations, servers and mainframe systems, and usually supports payment collection in the business office at the workstation if the stakeholder is a provider. The end-to-end information flow is the same whether the claim status request is conducted in real time or batch. It is the Phase II CORE I rules that specify the respective response times for real time and for batch processing modes. Figure 2 below depicts this overall information flow.

**2.4.3.3 Claim Status Request Business Process Description**

**2.4.3.3.1 Business Office Claim Payment Management**

A business office insurance specialist at the provider’s office is inquiring about a claim that has been submitted, for which adjudication and response is overdue. The business office insurance payment specialist collects the required data from the “system” following prompts on the workstation and enters all of the necessary information into the PMS/HIS. In some systems, the request may be initiated automatically based on a past due expected date for adjudication reporting.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

When all of the necessary patient demographic and insurance information is entered, the payment specialist is prompted to submit a claim status request transaction by either a menu selection or by clicking an icon (as determined by the PMS/HIS vendor user interface design.)

The PMS/HIS automatically edits the claim status transaction for completeness and valid data values where applicable and prompts the payment specialist to correct any invalid or omitted data. When the transaction editing is completed, the PMS/HIS assigns a unique internal tracking number, records the identification and address of the workstation used by the payment specialist, and creates the claim status request transaction.

Using internal tables/files and/or an external directory service, the PMS/HIS determines the Internet address for the health plan where the claim was submitted, creates and envelopes the complete ASC X12 Interchange containing the v5010 276 request, creates the message encapsulation envelope, assigns a payload identifier, records the date/time, links the message to the ASC v5010 X12/276 Interchange, and establishes a communications session with the health plan's system.

*2.4.3.3.2 Health Plan Real Time Claim status Request Process*

The health plan's Internet portal accepts the provider's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC v5010 X12 276 Interchange, which is then extracted and passed to the health plan's EDI management system for further processing. The health plan's EDI management system, processes (validates) the ASC v5010 X12 276 Interchange.

If the ASC v5010 X12 276 Interchange fails ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the ASC v5010 X12 999 Implementation Acknowledgement indicating the rejection of the Functional Group, returns the rejection acknowledgement to the provider, terminates the communications session and discontinues any further processing of the request transaction.

If the v5010 X12 276 Interchange passes (with or without errors) ASC X12 TR3 implementation guide verification, the EDI management system extracts the claim status request data from the v5010 276 transaction set, creates the required internal request transaction which is routed to the claim status system for processing. The claim status system accesses all of the necessary internal data stores (files, databases, etc.) to process the claim status request to determine the status of the claim identified in the request. The data are then assembled and routed to the health plan's EDI management system.

The EDI management system edits the claim status response data for correctness and completeness, creates the ASC X12 Interchange containing the v5010 277 claim status response, passes the ASC v5010 X12 277 Interchange to the open communications session which returns the ASC v5010 X12 277 Interchange to the provider's PMS/HIS. The health plan's Internet portal then terminates the communications session upon successful transfer of the ASC v5010 X12 277 Interchange to the provider's system.

*2.4.3.3.3 Provider's Real Time Claim Status Response Process*

The provider's PMS/HIS receives the ASC v5010 X12 277 Interchange from the health plan, records the message receipt date/time, assigns an internal tracking number to the message linked to the ASC v5010 X12 277 Interchange, and matches the tracking number, message receipt date/time to the corresponding ASC v5010 X12 276 Interchange. The PMS/HIS then processes (validates) the ASC v5010 X12 277 Interchange.

If the ASC v5010 X12 277 Interchange fails ASC X12 TR3 implementation guide verification, the PMS/HIS generates a notice to the provider's appropriate internal support staff for problem resolution following established internal procedures. No rejection acknowledgement is returned to the health plan.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

If the ASC v5010 X12 277 Interchange passes (with or without errors) ASC X12 TR3 implementation guide verification, the PMS/HIS extracts the claim status response data from the v5010 277 transaction set, creates the required internal claim status response transaction which is routed to the correct workstation for display to the scheduler.

The PMS/HIS displays the claim status information, enabling the payment specialist to take appropriate action by obtaining corrected claim data as indicated from the PMS/HIS or other sources and either resubmitting a corrected claim status request or a corrected claim.

If the v5010 277 claim status response transaction contains the requested information, the PMS/HIS displays the information, enabling the payment specialist to confirm the claim status. Status of the claim within the health plan's adjudication process may include pre-adjudication acceptance/rejection, incorrect or incomplete claim pending, claim suspended/additional information being requested, or claim finalized. Subsequent activities may include calling the patient or the health plan, or pending further action to a later date. Status codes and the date of the request are stored in the PMS/HIS.

*2.4.3.3.4 Provider's Batch Claim Status Process*

On a daily basis the provider's PMS/HIS automatically scans all past due claim adjudication responses for the current date, extracts all of the necessary data, creates one or more batches of claim status inquiries for each health plan covering the overdue adjudication responses for that date, assigns unique internal tracking numbers and records the date/time for each batch.

Using internal tables/files and/or an external directory service, the PMS/HIS determines the Internet address for each health plan, envelopes the complete ASC X12 Interchange containing the batch of v5010 276 inquiries for each health plan, creates the message encapsulation envelope, assigns a payload identifier, records the date/time, links the message to the correct batch ASC v5010 X12 276 Interchange, establishes a communications session with each health plan's system and transfers the batch ASC v5010 X12 276 Interchange to the health plan.

*2.4.3.3.5 Health Plan Batch Claim Status Request Process*

The health plan's Internet portal accepts the provider's system logon, records the message receipt date/time, assigns an internal tracking number to the message linked to the batch ASC v5010 X12 276 Interchange, which is then extracted and passed to the health plan's EDI management system for further processing. The health plan's Internet portal returns the correct HTTP message accepted code to the provider's PMS/HIS and terminates the communications session.

The health plan's EDI management system, processes (validates) the batch ASC v5010 X12 276 Interchange. If the batch ASC v5010 X12 276 Interchange fails ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the ASC v5010 X12 999 Implementation Acknowledgement indicating the rejection of the Functional Group, stages the rejection acknowledgement for subsequent retrieval by the provider's PMS/HIS, and discontinues any further processing of the batch ASC v5010 X12 276 Interchange.

If the batch ASC v5010 X12 276 Interchange passes (with or without errors) ASC X12 TR3 implementation guide verification, the EDI management system automatically generates the ASC v5010 X12 999 Implementation Acknowledgement indicating the acceptance of the ASC v5010 X12 276 Functional Group, and stages the acknowledgement for subsequent retrieval by the provider's PMS/HIS.

The EDI management system extracts the claim status request data from the v5010 276 transaction set, creates the required internal request transaction(s) which are routed to the claim status system for processing. The claim status system accesses all of the necessary internal data stores (files, databases, etc.) to process the claim status inquiries to determine the claim status for each of the inquiries. The data are then assembled and routed to the health plan's EDI management system.

**PHASE II CORE CERTIFICATION TEST SUITE**  
**VERSION 2.1.0 MARCH 2011**

The EDI management system edits the claim status response data for correctness and completeness, creates the batch(es) ASC X12 Interchange containing the v5010 277 claim status responses, stages the batch(es) ASC v5010 X12 277 Interchange for subsequent retrieval by the provider's PMS/HIS.

*2.4.3.3.6 Provider's Batch Claim Status Response Process*

Two hours after transferring the batch ASC v5010 X12 276 Interchange to the health plan's Internet portal, the provider's PMS/HIS establishes a communications session with each health plan's system, requests either a list of available files for retrieval or specific file(s). Specific file(s) may be either an ASC v5010 X12 999 Implementation Acknowledgement or an ASC v5010 X12 277 Interchange or any combination of these. The health plan's Internet portal responds appropriately to the provider's PMS/HIS request. The provider's PMS/HIS then retrieves the requested and/or available file(s), records the message receipt date/time, assigns internal tracking number(s) to the message and retrieved file(s) linked to the ASC X12 Interchange(s), and matches the tracking number, message receipt date/time to the corresponding ASC v5010 X12 276 Interchange. The PMS/HIS then processes (validates) the ASC X12 Interchange(s) retrieved.

If the batch ASC v5010 X12 277 Interchange fails ASC X12 TR3 implementation guide verification, the PMS/HIS generates an ASC v5010 X12 999 Implementation Acknowledgement, establishes a communication session with the appropriate health plan's Internet portal and transfers the ASC v5010 X12 999 Implementation Acknowledgement to the health plan. The PMS/HIS also generates a notice to the provider's appropriate internal support staff for any problem resolution following established internal procedures.

If the v5010 X12 277 Interchange passes (with or without errors) ASC X12 TR3 implementation guide verification, the PMS/HIS extracts the claim status response data from the v5010 277 transaction set, creates the required internal claim status response transaction(s) which are routed to the correct workstation for analysis and processing by the designated support staff.

The PMS/HIS displays the claim status information, enabling the payment specialist to take appropriate action by obtaining corrected claim data as indicated from the PMS/HIS or other sources and either resubmitting a corrected claim status request or a corrected claim.

If the v5010 277 claim status response transaction contains the requested claim status information, the PMS/HIS displays the information, enabling the payment specialist staff to extend the expected adjudication date, contact the patient, or contact the health plan by telephone, fax or other means to resolve problems associated with completing adjudication.

### 3 Test Scenarios by Rule

The following sections cover certification testing requirements specific to each Phase II CORE Rule.

#### 3.1 PHASE II CORE 250 CLAIM STATUS BATCH ACKNOWLEDGEMENTS RULE TEST SCENARIO

##### 3.1.1 Key Rule Requirements

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

Requires that

1. The receiver of a v5010 276 or a v5010 277 must always return a v5010 999 implementation acknowledgement to indicate that the Functional Group was either accepted, accepted with errors, or rejected. (§4.3.1)
2. The v5010 999 must not be returned during the initial communications session in which the v5010 276 batch is submitted. (§4.3.2)

##### 3.1.2 Conformance Testing Requirements

These scenarios test the following conformance requirements of the Phase II CORE Batch Acknowledgement Rule. Other requirements of this rule that may not be listed below are not included in this test scenario. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in this test scenario.

1. A v5010 999 is returned to indicate either acceptance, acceptance with errors, or rejection of a Functional Group (including the enclosed Transaction Set).
  - a. A v5010 999 must ALWAYS be returned whether or not there are errors in the Functional Group and enclosed Transaction Set.
2. A v5010 277 response transaction must always be returned for an Interchange, Functional Group and Transaction Set that complies with ASC X12 TR3 implementation guide requirements.

**PHASE II CORE 250 CLAIM STATUS BATCH ACKNOWLEDGEMENTS RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.1.3 Test Scripts Assumptions**

1. All communications sessions and logon's are valid; no error conditions are created or encountered.
2. Test scripts will test ONLY for valid and invalid ASC X12 Interchange, Functional Group, Transaction Set and will not test for v5010 277 data content.
3. Test scripts will test the following error conditions:
  - a. Invalid ASC X12 Interchange (ISA control number match error)
  - b. Invalid Functional Group (GS/GE control number match error)
  - c. Invalid Transaction Set (missing required segment)
4. Test scripts will test the following valid conditions:
  - a. Valid ASC X12 Interchange Control Segments
  - b. Valid Functional Group Control Segments
  - c. Valid ASC X12 Transaction Set
5. The Phase II CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of the Phase II CORE requirements of the rule.

**PHASE II CORE 250 CLAIM STATUS BATCH ACKNOWLEDGEMENTS RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.1.4 Detailed Step-By-Step Test Script**

**REMINDER:** Phase II CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>5</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>6</sup>
1.	A v5010 999 is returned on an invalid Functional Group ( <a href="#">Key Rule Requirement #1</a> )	An ASC X12 Interchange containing only a v5010 999		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.	A v5010 277 response transaction is returned for a Functional Group and Transaction set that complies with the v5010 ASC X12 TR3 implementation guide ( <a href="#">Key Rule Requirement #1</a> )	An ASC X12 Interchange containing a v5010 277		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<sup>5</sup> A checkmark in the box indicates the stakeholder type to which the test applies.

<sup>6</sup> If you believe a specific test, or a portion of a specific test, does not apply to your system, check the N/A box and submit a statement describing your rationale.

### 3.2 PHASE II CORE 250 CLAIM STATUS REAL TIME ACKNOWLEDGEMENTS RULE TEST SCENARIO

#### 3.2.1 Key Rule Requirements

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

Requires that

1. A v5010 999 is returned only to indicate a v5010 276 Functional Group (including the enclosed Transaction Set) error resulting in the rejection of the entire Functional Group. (§4.2.1.1)
  - a. A v5010 999 must not be returned if the v5010 276 Functional Group and enclosed Transaction Set is not rejected. (§4.2.1.1)
2. A v5010 277 must always be returned for an Interchange, Functional Group and Transaction Set that complies with ASC X12 v5010 276 requirements. (§4.2.1.2)

#### 3.2.2 Conformance Testing Requirements

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

These scenarios test the following conformance requirements of the Phase II CORE Real Time Acknowledgement Rule. Other requirements of this rule that may not be listed below are not included in this test scenario. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in this test scenario.

1. A v5010 999 is returned only to indicate a Functional Group (including the enclosed Transaction Set) error resulting in the rejection of the entire Functional Group.
  - a. A v5010 999 must not be returned if there are errors not resulting in the rejection of the Functional Group and enclosed Transaction Set.
2. A v5010 277 must always be returned for an Interchange, Functional Group and Transaction Set that complies with ASC X12 v5010 276 requirements.
  - a. A v5010 277 may contain either the appropriate STC Claim or Line Level Status Information segment(s) in the case of a business level error or the data segments containing the requested claim status details.

**PHASE II CORE 250 CLAIM STATUS REAL TIME ACKNOWLEDGEMENTS RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.2.3 Test Scripts Assumptions**

1. All communications sessions and logons are valid; no error conditions are created or encountered.
2. Test scripts will test ONLY for valid and invalid ASC X12 Interchange, Functional Group, Transaction Set and will not test for v5010 277 data content.
3. Test scripts will test the following error conditions:
  - a. Invalid ASC X12 Interchange (ISA control number match error)
  - b. Invalid Functional Group (GS/GE control number match error)
  - c. Invalid Transaction Set (missing required segment)
4. Test scripts will test the following valid conditions:
  - a. Valid ASC X12 Interchange Control Segments
  - b. Valid Functional Group Control Segments
  - c. Valid ASC X12 Transaction Set
5. The Phase II CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of the Phase II CORE requirements of the rule.

**PHASE II CORE 250 CLAIM STATUS REAL TIME ACKNOWLEDGEMENTS RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.2.4 Detailed Step-By-Step Test Script**

**REMINDER:** Phase II CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>7</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>8</sup>
1.	A v5010 999 is returned on an invalid Functional Group ( <a href="#">Key Rule Requirement #1</a> )	An ASC X12 Interchange containing only a v5010 999		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.	A v5010 999 is not returned on a valid ASC X12 Interchange ( <a href="#">Key Rule Requirement #1.a</a> )	No v5010 999 returned		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3.	A v5010 277 Claim Status Response transaction set is always returned for a valid v5010 276 Claim Status Inquiry Transaction set ( <a href="#">Key Rule Requirement #2</a> )	An ASC X12 Interchange is returned containing only a v5010 277 transaction set		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<sup>7</sup> A checkmark in the box indicates the stakeholder type to which the test applies.

<sup>8</sup> If you believe a specific test, or a portion of a specific test, does not apply to your system, check the N/A box and submit a statement describing your rationale.

### **3.3 PHASE II CORE 250 CLAIM STATUS RULE COMPANION GUIDE TEST SCENARIO**

#### **3.3.1 Key Rule Requirements**

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

1. All Phase II CORE-certified entities' Companion Guides covering the v5010 276/277 claim status inquiry and response transactions must follow the format/flow as defined in the CORE v5010 Master Companion Guide Template for HIPAA Transactions. (§4.7.1)
2. This rule does not require any Phase II CORE-certified entity to modify any other existing companion guides that cover other HIPAA-adopted transaction implementation guides.

#### **3.3.2 Conformance Testing Requirements**

These scenarios test the following conformance requirements of the Phase II CORE Companion Document Rule. Other requirements of this rule that may not be listed below are not included in this test scenario. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in this test scenario.

Conformance with this rule is considered achieved by health plans (or information sources) if all of the following criteria are achieved:

Submission to an authorized CORE certification testing company the following:

1. A copy of the table of contents of its official v5010 276/277 companion document.
2. A copy of a page of its official v5010 276/277 companion document depicting its conformance with the format for specifying the v5010 276/277 data content requirements.

Such submission may be in the form of a hard copy paper document, an electronic document, or a URL where the table of contents and an example of the v5010 276/277 content requirements of the companion document is located.

**PHASE II CORE 250 CLAIM STATUS COMPANION GUIDE RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.3.3 Test Scripts Assumptions**

1. The detailed content of the v5010 276/277 companion document will not be submitted to the authorized CORE certification testing company.
2. The detailed content of the v5010 276/277 companion document will not be examined nor evaluated.
3. Test script will test ONLY that the table of contents of the companion document is:
  - a. Customized and specific to the entity undergoing this test
  - b. Conforms to the flow as specified in the Table of Contents of the CORE Master Companion Document Template
  - c. Conforms to the presentation format for depicting segments, data elements and codes as specified in the CORE v5010 276/277 Companion Document Template
4. The Phase II CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of the Phase II CORE requirements of the rule.

**PHASE II CORE 250 CLAIM STATUS COMPANION GUIDE RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.3.4 Detailed Step-By-Step Test Script**

**REMINDER:** Phase II CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>9</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>10</sup>
1.	Companion Document conforms to the flow and format of the CORE Master Companion Document Template	Submission of the Table of Contents of the 276/277 companion document, including an example of the v5010 276/277 content requirements		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.	Companion Document conforms to the format for presenting each segment, data element and code flow and format of the CORE Master Companion Document Template	Submission of a page of the v5010 276/277 companion document depicting the presentation of segments, data elements and codes showing conformance to the required presentation format		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<sup>9</sup> A checkmark in the box indicates the stakeholder type to which the test applies.

<sup>10</sup> If you believe a specific test, or a portion of a specific test, does not apply to your system, check the N/A box and submit a statement describing your rationale.

### 3.4 PHASE II CORE 250 CLAIM STATUS RULE BATCH RESPONSE TIME TEST SCENARIO

#### 3.4.1 Key Rule Requirements

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

##### Batch Mode Response Time Requirements

1. Maximum response time when processing in batch mode for the receipt of a v5010 277 response to a v5010 276 inquiry submitted by a provider or on a provider's behalf by a clearinghouse/switch by 9:00 pm Eastern time of a business day must be returned by 7:00 am Eastern time the following business day. A business day consists of the 24 hours commencing with 12:00 am (Midnight or 0000 hours) of each designated day through 11:59 pm (2359 hours) of that same designated day. The actual calendar day(s) constituting business days are defined by and at the discretion of each health plan or information source. (§4.5)
2. v5010 999 responses must be available to the submitter within one hour of receipt of the batch: to the provider in the case of a batch of v5010 276 inquiries and to the health plan (or information source) in the case of a batch of v5010 277 responses. (§4.5.1)
3. Conformance with this maximum response time rule shall be considered achieved if 90 percent of all required responses as specified in the Phase II CORE 250: Claim Status Rule Batch Acknowledgement version 2.1.0 are returned within the specified maximum response time as measured within a calendar month. (§4.5.2)
4. Each CORE-certified entity must demonstrate its conformance with this maximum response time rule by demonstrating its ability to capture, log, audit, match and report the date (YYYYMMDD), time (HHMMSS) and control numbers from its own internal systems and the corresponding data received from its trading partners. (§4.5.2)

#### 3.4.2 Conformance Testing Requirements

These scenarios test the following conformance requirements of the Phase II CORE Batch Response Time Rule. Other requirements of this rule that may not be listed below are not included in this test scenario. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in this test scenario.

1. Capturing, logging, auditing, matching and reporting the date (YYYYMMDD), time (HHMMSS) and control numbers from its own internal systems and its trading partners.

**PHASE II CORE 250 CLAIM STATUS BATCH RESPONSE TIME RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.4.3 Test Scripts Assumptions**

1. All transactions, data, communications session are valid; no error conditions are created or encountered.
2. The provider's PMS/HIS system generates all of the required data necessary for its clearinghouse to generate the batch ASC v5010 X12 276 claim status inquiries.
3. The provider's clearinghouse's EDI management system generates a syntactically correct ASC X12 interchange containing the v5010 276 claim status inquiry, therefore, no v5010 999 acknowledgement is to be returned by the health plan's system.
4. All HTTP/S communications sessions between all parties are successfully established with the respective Internet portals communications servers; therefore, no HTTP POST error messages are created by any of communications servers.
5. The health plan's system successfully locates and verifies the claim identified in the v5010 276 inquiry and outputs the required data required by its EDI management system to successfully generate a syntactically correct ASC X12 interchange containing the v5010 277 response.
6. The health plan's EDI management system generates a syntactically correct ASC X12 interchange containing the v5010 277 claim status response.
7. The Phase II CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of the Phase II CORE requirements of the rule.

**PHASE II CORE 250 CLAIM STATUS BATCH RESPONSE TIME RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.4.4 Detailed Step-By-Step Test Script:**

**REMINDER:** Phase II CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>11</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>12</sup>
1.	Verify that outer most communications module(s) transmits all required data elements in the claim status inquiry message. If transactions use an alternate communication method to HTTP/S, entities must store enough information from the ASC X12 transaction to uniquely identify the transmission in addition to the times that the request was received and response was sent ( <a href="#">Key Rule Requirement #4</a> )	Output a system-generated audit log report showing all required data elements		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<sup>11</sup> A checkmark in the box indicates the stakeholder type to which the test applies.

<sup>12</sup> If you believe a specific test, or a portion of a specific test, does not apply to your system, check the N/A box and submit a statement describing your rationale.

**PHASE II CORE 250 CLAIM STATUS BATCH RESPONSE TIME RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS**  
**VERSION 2.1.0 MARCH 2011**

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>11</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>12</sup>
2.	Verify that outer most communications module(s) captures, assigns, logs and links all required data elements from the ASC v5010 X12 277 Interchange to the submitted ASC v5010 X12 276 Interchange. If transactions use an alternate communication method to HTTP/S, entities must store enough information from the ASC X12 transaction to uniquely identify the transmission in addition to the times that the request was received and response was sent ( <a href="#">Key Rule Requirement #4</a> )	Output a system-generated audit log report showing all required data elements		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3.	Verify that outer most communications module(s) transmits all required data elements in the claim status response message. If transactions use an alternate communication method to HTTP/S, entities must store enough information from the ASC X12 transaction to uniquely identify the transmission in addition to the times that the request was received and response was sent ( <a href="#">Key Rule Requirement #4</a> )	Output a system-generated audit log report showing all required data elements		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
4.	Verify that outer most communications module(s) captures, assigns, logs and links all required data elements from the ASC X12/v5010 276 Interchange to the submitted ASC v5010 X12/277 Interchange. If transactions use an alternate communication method to	Output a system-generated audit log report showing all required data elements		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

	HTTP/S, entities must store enough information from the ASC X12 transaction to uniquely identify the transmission in addition to the times that the request was received and response was sent ( <a href="#">Key Rule Requirement #4</a> )									

### 3.5 PHASE II CORE 250 CLAIM STATUS RULE REAL TIME RESPONSE TIME TEST SCENARIO

#### 3.5.1 Key Rule Requirements

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

#### Real Time Mode Response Time Requirements

1. Maximum response time when processing in real time mode<sup>13</sup> for the receipt of a v5010 277 (or in the case of an error, a v5010 999 response from the time of submission of a v5010 276 inquiry must be 20 seconds (or less). v5010 999 response rejections must be returned within the same response timeframe. (§4.4)
2. Conformance with this maximum response time rule shall be considered achieved if 90 percent of all required responses are returned within the specified maximum response time as measured within a calendar month. (§4.4)
3. Each Phase II CORE-certified entity must demonstrate its conformance with this maximum response time rule by demonstrating its ability to capture, log, audit, match and report the date (YYYYMMDD), time (HHMMSS) and control numbers from its own internal systems and the corresponding data received from its trading partners. (§4.4.1)

#### 3.5.2 Conformance Testing Requirements

These scenarios test the following conformance requirements of the Phase II CORE Real Time Response Time Rule. Other requirements of this rule that may not be listed below are not included in this test scenario. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in this test scenario.

1. Capturing, logging, auditing, matching and reporting the date (YYYYMMDD), time (HHMMSS) and control numbers from its own internal systems and its trading partners.

---

<sup>13</sup> Real-time mode is defined in the CORE Glossary of Terms.

**PHASE II CORE 250 CLAIM STATUS REAL TIME RESPONSE TIME RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.5.3 Test Scripts Assumptions**

1. All transactions, data, communications session are valid; no error conditions are created or encountered.
2. The provider's PMS/HIS system generates a syntactically correct ASC X12 interchange containing the v5010 276 claim status inquiry, therefore, no v5010 999 acknowledgement is to be returned by the health plan's system.
3. The provider's PMS/HIS system's communications module successfully establishes the HTTP/S communication session with the health plan's Internet portal communications server; therefore, no HTTP POST error message is created by the health plan's communications server.
4. The health plan's system successfully locates and verifies the claim identified in the v5010 276 inquiry and outputs the required data required by its EDI management system to successfully generate a syntactically correct ASC X12 interchange containing the v5010 277 response.
5. The health plan's EDI management system generates a syntactically correct ASC X12 interchange containing the v5010 277 claim status response.
6. The Phase II CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of the Phase II CORE requirements of the rule.

**PHASE II CORE 250 CLAIM STATUS REAL TIME RESPONSE TIME RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.5.4 Detailed Step-By-Step Test Script:**

**REMINDER:** Phase II CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>14</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>15</sup>
1.	Verify that outer most communications module(s) transmits all required data elements in the claim status inquiry message. If transactions use an alternate communication method to HTTP/S, entities must store enough information from the ASC X12 transaction to uniquely identify the transmission in addition to the times that the request was received and response was sent ( <a href="#">Key Rule Requirement #3</a> )	Output a system-generated audit log report showing all required data elements		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.	Verify that outer most communications module(s) captures, assigns, logs and links all required data elements from the ASC v5010 X12/277 Interchange to the submitted ASC v5010 X12/276	Output a system-generated audit log report showing all required data elements		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<sup>14</sup> A checkmark in the box indicates the stakeholder type to which the test applies.

<sup>15</sup> If you believe a specific test, or a portion of a specific test, does not apply to your system, check the N/A box and submit a statement describing your rationale.

### 3.6 PHASE II CORE 250 CLAIM STATUS RULE SYSTEM AVAILABILITY TEST SCENARIO

#### 3.6.1 Key Rule Requirements

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

##### System Availability Requirements

1. System availability must be no less than 86 percent per calendar week for both real-time and batch processing modes. This will allow for health plan, (or other information source) clearinghouse/switch or other intermediary system updates to take place within a maximum of 24 hours per calendar week for regularly scheduled downtime. (§4.6.1)

##### Reporting Requirements

###### 2. Scheduled Downtime

Phase II CORE-certified health plans (or information sources), clearinghouses/switches or other intermediaries must publish their regularly scheduled system downtime in an appropriate manner (e.g., on websites or in companion guides) such that the healthcare provider can determine the health plan's system availability so that staffing levels can be effectively managed. (§4.6.2.1)

###### 3. Non-Routine Downtime

For non-routine downtime (e.g., system upgrade), an information source must publish the schedule of non-routine downtime at least one week in advance. (§4.6.2.2)

###### 4. Unscheduled Downtime

For unscheduled/emergency downtime (e.g., system crash), an information source will be required to provide information within one hour of realizing downtime will be needed. (§4.6.2.3)

##### Other Requirements

5. No response is required during scheduled downtime(s). (§4.6.2.4)
6. Each health plan, (or other information source) clearinghouse/switch or other intermediary will establish its own holiday schedule and publish it in accordance with the rule above. (§4.6.2.5)

**PHASE II CORE 250 CLAIM STATUS SYSTEM AVAILABILITY RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.6.2 Conformance Testing Requirements**

These scenarios test the following conformance requirements of the Phase II CORE System Availability Rule. Other requirements of this rule that may not be listed below are not included in this test scenario. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in this test scenario.

Demonstrate its ability to publish to its trading partner community the following schedules:

1. Its regularly scheduled downtime schedule, including holidays.
2. Its notice of non-routine downtime showing schedule of times down.
3. A notice of unscheduled/emergency downtime notice.

**3.6.3 Test Scripts Assumptions**

1. The entity has implemented in its production environments the necessary policies, procedures and method(s) required to conform to the requirements of the System Availability rule.
2. The Phase II CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of the Phase II CORE requirements of the rule.

**PHASE II CORE 250 CLAIM STATUS SYSTEM AVAILABILITY RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.6.4 Detailed Step-By-Step Test Script**

**REMINDER:** Phase II CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>16</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>17</sup>
1.	Publication of regularly scheduled downtime, including holidays and method(s) for such publication ( <a href="#">Key Rule Requirement #2</a> )	Submission of actual published copies of regularly scheduled downtime including holidays and method(s) of publishing		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.	Publication of non-routine downtime notice and method(s) for such publication ( <a href="#">Key Rule Requirement #3</a> )	Submission of a sample notice of non-routine downtime including scheduled of down time and method(s) of publishing		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3.	Publication of unscheduled/emergency downtime notice and method(s) for such publication ( <a href="#">Key Rule Requirement #4</a> )	Submission of a sample notice of unscheduled/emergency downtime including method(s) of publishing		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<sup>16</sup> A checkmark in the box indicates the stakeholder type to which the test applies.

<sup>17</sup> If you believe a specific test, or a portion of a specific test, does not apply to your system, check the N/A box and submit a statement describing your rationale.

### 3.7 PHASE II CORE 258 NORMALIZING PATIENT LAST NAME RULE CERTIFICATION TESTING

#### 3.7.1 Key Rule Requirements

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

Requires a Phase II CORE-Certified health plan (or information source) to:

1. Normalize the last name submitted on the v5010 270 before using submitted last name. (§4.2.1)<sup>18</sup>
2. Normalize internally-stored last name before using internally-stored last name. (§4.2.1)
3. Return the v5010 271 response with AAA segment using appropriate error code(s) as required by the Phase II CORE 259 AAA Error Code Reporting Rule when normalized names are not successfully matched or validated. (§4.3)
4. Return the un-normalized internally-stored last name when it does not match the un-normalized submitted last name in the NM103-1035 data element and return the INS segment as specified in Table 4.3-1. (§4.3)
5. Return the v5010 271 response as required by the Phase II CORE 260 Eligibility & Benefits (270/271) Data Content Rule when normalized names are successfully matched or validated. (§4.2.1)

Requires a receiver of the v5010 271 response to:

6. Detect all data elements addressed by the rule as returned in the v5010 271 response. (§4.4)
7. Display to the end user text uniquely describing the specific error condition(s) and data elements returned in the v5010 271. (§4.4)
8. Ensure that displayed text accurately represents the Follow Up Action without changing meaning and intent of the Follow Up Action. (§4.4)

Recommendations for submitters of the v5010 270:

9. Submit a person's name suffix in the NM107-1039 data element when submitter's system enables capture and storage of a name suffix in a separate data field. (§4.1.1)
10. Separate a person's name suffix from the last name using either a space, comma or forward slash when the submitter's system does not enable the capture and storage of a name suffix in a separate data field. (§4.1.2)
11. Attempt to identify and parse the last name data element to extract any name suffix and to submit the suffix in the NM107-1039 data element. (§4.1.2)

---

<sup>18</sup>The CORE normalization process is specified in §4.2.1.

**PHASE II CORE 258 NORMALIZING PATIENT LAST NAME RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.7.2 Conformance Testing Requirements**

**The Phase II CORE Detailed Step-By-Step Test Scripts will not include comprehensive testing requirements for all possible permutations of the Phase II CORE Normalizing Patient Last Name Rule.**

Conformance must be demonstrated by successful completion of the Detailed Step-By-Step Test Scripts specified below with a CORE-authorized testing vendor.

The Detailed Step-By-Step Test Scripts specify each specific test that must be completed by each stakeholder type. There are one or more Detailed Step-By-Step Test Scripts for each of the following conformance testing requirements of the Phase II CORE 258 Normalizing Patient Last Name Rule.

There may be other requirements of the rule not specified here or in The Detailed Step-By-Step Test Scripts. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in these Conformance Testing Requirements and Detailed Step-by-Step Test Scripts.

1. The health plan must demonstrate its system capability to normalize both submitted and internally stored last names and return the required AAA errors when normalized names do not match.
2. The health plan must demonstrate its system has the capability to normalize both submitted and internally stored last names and:
  - a. Return the internally stored un-normalized last name when both submitted and internally stored un-normalized last names do not match and the normalized last names do match.
  - b. Return the required INS segment.
  - c. Return the v5010 271 response required by the Phase II CORE Eligibility & Benefits (270/271) Data Content Rule.
3. The receiver of the v5010 271 response must demonstrate it system has the capability to extract and make available to the end user
  - a. The AAA and corresponding Phase II CORE 259 AAA Error Code Reporting Rule Error Condition Descriptions.
  - b. The INS segment information.
4. The last name returned by the health plan.

**PHASE II CORE 258 NORMALIZING PATIENT LAST NAME RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.7.3 Test Scripts & Assumptions**

1. Entity is Phase I CORE certified.
2. The health plan has loaded into its testing system the Phase II CORE Master Test Bed Data which contains all of the values necessary to generate a response transaction covering each of the requirements specified in the Conformance Testing Section above and in the Detailed Step-by-Step Test Scripts below.
3. The CORE-authorized Certification Testing Vendor's test system has transmitted to the health plan a v5010 270 in which the subscriber last name data element contains either one of the character strings (§4.2.2) and/or special characters (§3.7) specified in the rule.
4. A syntactically correct ASC X12 Interchange containing the v5010 270 inquiry transaction set is created by the submitter's system; therefore no v5010 999 acknowledgement is to be returned by the health plan's system.
5. A communications session between all parties is successfully established in compliance with the Phase II CORE 270 Connectivity Rule; therefore, no error messages are created by any of communications servers.
6. The health plan's EDI management system generates a syntactically correct ASC X12 interchange containing the v5010 271 eligibility response.
7. The CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of the CORE requirements of the rule.

**PHASE II CORE 258 NORMALIZING PATIENT LAST NAME RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.7.4 Detailed Step-by-Step Test Scripts**

**REMINDER:** CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Note: The CORE-authorized Certification Testing Vendors will generate one or more randomly generated v5010 270 inquiries based on the Master Test Bed Data that will cause the health plan to encounter each of the described error conditions in Test Scripts #1 and #2.

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>19</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>20</sup>
1.	Create a valid v5010 271 response transaction indicating that the normalized submitted and internally-stored last names do not match ( <a href="#">Key Rule Requirement #3</a> )	Output a valid v5010 271 transaction containing the AAA segment with AAA03=73 Invalid/Missing Subscriber/Insured Name		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<sup>19</sup> The checkmark in each box below indicates the stakeholder type to which the test script applies.

<sup>20</sup> If you believe a specific test, or a portion of a specific test, does not apply to your system, check the N/A box and submit a statement describing your rationale.

				<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>20</sup>
2.	Create a valid v5010 271 response transaction in which the un-normalized internally-stored last name is returned when the normalized submitted and internally-stored last names match ( <a href="#">Key Rule Requirement #4</a> )	Output a valid v5010 271 transaction containing the INS segment as required by the CORE Name Normalization rule in which the NM103-1035 in Loop 2100C contains the un-normalized internally-stored last name		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3.	Extract from a valid v5010 271 response transaction the patient identification data elements received in the NM1 and DMG segments in Loop 2100C and the information contained in the AAA segment ( <a href="#">Key Rule Requirement #6, #7, and #8</a> )	Provide a screen print of the output from Test #1 showing that the required information is displayed to the information requester		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
4.	Extract from a valid v5010 271 response transaction the last name as received in the NM103-1035 in Loop 2100C and the information contained in the INS segment ( <a href="#">Key Rule Requirement #6, #7, and #8</a> )	Provide a screen print of the output from Test #2 showing that the required information is displayed to the information requester		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

### **3.8 PHASE II CORE 259 AAA ERROR CODE REPORTING RULE**

#### **3.8.1 Key Rule Requirements**

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

Requires a Phase II CORE-Certified health plan (or information source) to:

1. Return a AAA segment for each error condition detected. (§4.1, §4.5)
2. Return code “N” in the AAA01 Valid Request Indicator data element. (§4.1)
3. Return the specified Reject Reason Code in AAA03 as specified for the error condition detected. (§4.1)
4. Return code “C” in the AAA04 Follow-up Action Code data element. (§4.1)
5. Return submitted data elements used. (§4.1)
6. Return a AAA segment for each error condition detected along with submitted data elements used when conducting a pre-query evaluation. (§4.3)
7. Return a AAA segment for each missing and required data element when conducting a pre-query evaluation. (§4.3.1)
8. Return a AAA segment for an invalid MID when conducting a pre-query evaluation. (§4.3.2)
9. Return a AAA segment for an invalid DOB when conducting a pre-query evaluation. (§4.3.2)
10. Return a AAA segment for each error condition detected along with submitted data elements used when conducting a post-query evaluation. (§4.4)

Requires a receiver of the v5010 271 response to:

11. Detect all combinations of error conditions from the AAA segments in the v5010 271 response. (§4.2)
12. Detect all data elements addressed by the rule as returned in the v5010 271 response. (§4.2)
13. Display to the end user text uniquely describing the specific error condition(s) and data elements returned in the v5010 271. (§4.2)
14. Ensure that displayed text accurately represents the AAA03 error code and corresponding Error Condition Description without changing meaning and intent of the Error Condition Description. (§4.2, §4.5)

Defines:

15. Pre-query evaluation of patient identification elements. (§3.2)
16. Post-query evaluation of patient identification elements. (§3.2)
17. Query using one or more of submitted patient identification data elements. (§3.2)

**PHASE II CORE 259 AAA ERROR CODE REPORTING RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS**  
**VERSION 2.1.0 MARCH 2011**

**3.8.1 Key Rule Requirements**

Not Required of health plans:

18. To use any specific search and match criteria or logic. (§3.3)
19. To use any specific combination of submitted identification data elements. (§3.3)
20. To perform a pre-query evaluation. (§3.3)
21. To perform DOB validation. (§3.3)

**3.8.2 Conformance Testing Requirements**

The Phase II CORE Detailed Step-By-Step Test Scripts will not include comprehensive testing requirements for all possible permutations of the Phase II CORE AAA Error Code Reporting Rule.

Conformance must be demonstrated by successful completion of The Detailed Step-By-Step Test Scripts specified below with a CORE-authorized testing vendor.

The Detailed Step-By-Step Test Scripts specify each specific test that must be completed by each stakeholder type. There are one or more Detailed Step-By-Step Test Scripts for each of the following conformance testing requirements of the Phase II CORE AAA Error Code Reporting Rule.

There may be other requirements of the rule not specified here or in The Detailed Step-By-Step Test Scripts. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in these Conformance Testing Requirements and Detailed Step-by-Step Test Scripts.

1. The health plan must demonstrate its system capability to detect the various error conditions described and return the required AAA errors and submitted data elements when each error condition is detected.
2. The receiver of the v5010 271 must demonstrate its system capability to appropriately display text to the end user of the AAA errors code, the Error Condition Descriptions and the returned data elements.

**3.8.3 Test Scripts Assumptions**

1. Entity is Phase I CORE certified.
2. The health plan has loaded into its testing system the Phase II CORE Master Test Bed Data which contains all of the values necessary to generate a response transaction covering each of the requirements specified in the Conformance Testing Section above and in the Detailed Step-by-Step Test Scripts below.
3. The CORE-authorized Certification Testing Vendor's test system has transmitted to the health plan a v5010 270 which may contain one or more of the error conditions described in the rule (§4.5, Table 4.5-1).

**PHASE II CORE 259 AAA ERROR CODE REPORTING RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.8.3 Test Scripts Assumptions**

4. A syntactically correct X12 Interchange containing the v5010 270 inquiry transaction set is created by the submitter's system; therefore no v5010 999 acknowledgement is to be returned by the health plan's system.
5. A communications session between all parties is successfully established in compliance with the Phase II CORE Connectivity Rule; therefore, no error messages are created by any of communications servers.
6. The health plan's EDI management system generates a syntactically correct ASC X12 interchange containing the v5010 271 eligibility response.
7. The Phase II CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of the Phase II CORE requirements of the rule.

**PHASE II CORE 259 AAA ERROR CODE REPORTING RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.8.4 Detailed Step-by-Step Test Script**

**REMINDER:** Phase II CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Note: The CORE-authorized Certification Testing Vendors will generate one or more randomly generated v5010 270 inquiries based on the Master Test Bed Data that will cause the health plan to encounter each of the described error conditions in Test Scripts #1 and #2.

2.	Extract from a valid v5010 271 response transaction the patient identification data elements received in Loop 2100C and the information contained in the AAA segment ( <a href="#">Key Rule Requirement #13 and #14</a> )	Provide a screen print of the output from Test #1 showing that the required information is displayed to the information requester		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

### 3.9 PHASE II CORE 260 DATA CONTENT (270/271) RULE CERTIFICATION TESTING

#### 3.9.1 Key Rule Requirements

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

Requires a Phase II CORE-Certified health plan (or information source) to:

1. Respond to an explicit inquiry for a CORE-required service type with patient financial responsibility. (§4.1.3 through §4.1.3.3)<sup>23</sup>
2. Specify when a service type covered by this rule is a covered benefit only for in-network providers and not a covered benefit for out-of-network providers. (§4.1.3.1 through §4.1.3.3)
3. Specify the Health Plan base deductible amount only on the EB segment where EB03=30-Health Benefit Plan Coverage. (§4.1.3.1.1)
4. Specify the Health Plan remaining deductible amount that is the patient's financial responsibility only on the EB segment where EB03=30-Health Benefit Plan Coverage. (§4.1.3.1.2)
5. Return the benefit-specific (service type) remaining deductible amount for each benefit (service type) only when the amount is different than for the health plan. (§4.1.3.1.4)
6. Return the benefit-specific (service type) base deductible amount for each benefit (service type) only when the amount is different than for the health plan. (§4.1.3.1.3)
7. Return patient liability information (co-pay, co-insurance, and deductible information) for a CORE-required explicit v5010 270 inquiry.
8. Return both family and individual Health Plan base and remaining deductible amounts as applicable to the health plan coverage. (§4.1.3.1.1 and §4.1.3.1.2)
9. Not return base and remaining deductible amounts for a specific benefit (service type) when the amount is not different than for the health plan. (§4.1.3.1.1 and §4.1.3.1.2)
10. Return deductible amounts only in U.S. amounts. (§4.1.3.1)
11. Return the date(s) for the Health Plan base deductible only if different than the Health Plan Coverage date. (§4.1.4)
12. Return the date(s) for a Benefit-specific base deductible only if different than the Health Plan Coverage date. (§4.1.5)

<sup>23</sup> Section numbers reference the specific section in the CORE Phase II Data Content Rule that specifies the details of this requirement.

**PHASE II CORE 260 ELIGIBILITY & BENEFIT (270/271) DATA CONTENT RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

<b>3.9.1 Key Rule Requirements</b>
Prohibits a Phase II CORE-Certified health plan (or information source) from:  13. Redundantly returning the Health Plan <u>base and remaining deductible</u> amounts on any EB segment where EB03≠30-Health Benefit Plan Coverage when these amounts are not different for that specific service type. (§4.1.3.1.1 and §4.1.3.1.2)
Allows a Phase II CORE-Certified health plan (or information source) to:  14. Return patient liability information (co-pay, co-insurance, and deductible information) at its discretion for 9 specified Service Type Codes. (§4.1.3)
Specifies that:  15. Only Code 29-Remaining can be used in EB06 data element to specify the <u>remaining deductible</u> amount. (§4.1.3.1.2 and §4.1.3.1.4)  16. An additional 39 service type codes that must be supported for an explicit inquiry in addition to the 12 required codes in Phase I. (§4.1.1.2)
Requires a Phase II CORE-Certified Receiver of the v5010 271 Response to:  17. Detect and extract all data elements to which the rule applies. (§4.2)  18. Display to the end user text that appropriately describes these data elements. (§4.2)

**PHASE II CORE 260 ELIGIBILITY & BENEFIT (270/271) DATA CONTENT RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.9.2 Conformance Testing Requirements**

The Phase II CORE Detailed Step-By-Step Test Scripts will not include comprehensive testing requirements for all possible permutations of the Phase II CORE Data Content Rule.

Conformance must be demonstrated by successful completion of the Detailed Step-By-Step Test Scripts specified below with a CORE-authorized testing vendor.

The Detailed Step-By-Step Test Scripts specify each specific test that must be completed by each stakeholder type. There are one or more Detailed Step-By-Step Test Scripts for each of the following conformance testing requirements of the Phase II CORE Data Content Rule.

There may be other requirements of the rule not specified here or in The Detailed Step-By-Step Test Scripts. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in these Conformance Testing Requirements and Detailed Step-by-Step Test Scripts.

1. A health plan (or information source) must demonstrate that its eligibility system returns the Health Plan remaining deductible amount only on the EB segment where EB03=30 Health Benefit Plan coverage and not on any other EB segment.
2. A health plan (or information source) must demonstrate that their eligibility system returns a benefit-specific remaining deductible amount only when that amount is different than the Health Plan remaining deductible amount.
3. A health plan (or information source) must demonstrate that its eligibility systems returns patient liability amounts for an inquiry for a CORE-required explicit service type.
4. A health plan (or information source) must demonstrate that its eligibility systems returns the date(s) applicable to the Health Plan base deductible for the health plan covering the individual only if different than the Health Plan Coverage date.
5. A health plan (or information source) must demonstrate that their eligibility system returns the date(s) applicable to a specific benefit's base deductible only if different than the Health Plan Coverage date.
6. A system receiving the v5010 271 response must demonstrate its capability to detect and extract the data elements addressed in this rule and display such data and appropriate text to the end user.

**PHASE II CORE 260 ELIGIBILITY & BENEFIT (270/271) DATA CONTENT RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.9.3 Test Scripts Assumptions**

1. Entity is Phase I CORE-certified.
2. A syntactically correct ASC X12 Interchange containing the v5010 270 inquiry transaction set is created by the submitter's system; therefore no v5010 999 acknowledgements are to be returned by the health plan's system.
3. A communications session between all parties is successfully established in compliance with the Phase II CORE Connectivity Rule; therefore, no error messages are created by any of communications servers.
4. Automated transaction certification testing will be conducted between the entity and its selected authorized CORE certification testing vendor using the Phase II CORE Connectivity rule.
5. The health plan's eligibility system successfully locates and verifies the individual identified in the v5010 270 inquiry and outputs the data required to successfully generate the v5010 271 eligibility response required by this rule.
6. The health plan's EDI management system generates a syntactically correct ASC X12 interchange containing the v5010 271 eligibility response.
7. The Phase II CORE Master Test Bed Data contains all of the values necessary to enable the entity to generate a response transaction covering the Detailed Step-by-Step Test Scripts.
8. The Phase II CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of health plan benefit status or patient financial responsibility for all of the CORE required benefits addressed in the v5010 271 response.

**PHASE II CORE 260 ELIGIBILITY & BENEFIT (270/271) DATA CONTENT RULE CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.9.4 Detailed Step-by-Step Test Scripts**

**REMINDER:** Phase II CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>24</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>25</sup>
1.	Create a valid v5010 271 response transaction as defined in the Phase II CORE rule specifying the <u>Health Plan remaining deductible amount</u> ( <a href="#">Key Rule Requirement #4</a> )	Output a valid fully enveloped v5010 271 eligibility response transaction set with the correct Health Plan remaining deductible amount		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.	Create a valid v5010 271 response transaction as defined in the Phase II CORE rule specifying a <u>benefit-specific remaining deductible amount</u> different than the Health Plan remaining deductible amount ( <a href="#">Key Rule Requirement #5</a> )	Output a valid fully enveloped v5010 271 eligibility response transaction set with the correct benefit-specific remaining deductible amount		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<sup>24</sup> The checkmark in each box below indicates the stakeholder type to which the test script applies.

<sup>25</sup> If you believe a specific test, or a portion of a specific test, does not apply to your system, check the N/A box and submit a statement describing your rationale.

						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>25</sup>
6.	Extract from a valid v5010 271 response transaction as defined in the Phase II CORE rule the data required to be returned by a health plan in Test Scripts #1 through #5 ( <a href="#">Key Rule Requirement #17 and #18</a> )	Provide a screen print of the output from Tests #1 through #6 showing that the required information is displayed to the end user		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**PHASE II CORE 270 CONNECTIVITY RULE VERSION 2.2.0 CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.10 PHASE II CORE 270 CONNECTIVITY RULE CERTIFICATION TESTING** <sup>26</sup>

**3.10.1 Key Rule Requirements**

**Note: This section identifies at a high level the key requirements of this rule. Refer to the rule document for the specific language of the rule which governs. Section numbers in parentheses following each key requirement refer to the specific rule section which applies.**

**Requires a Phase II CORE-Certified Health Plan and Health Plan Vendor to implement a Server and to:**

1. Implement Server capability to support both Message Envelope Standards and Message Exchanges specified in the rule for Real Time. (§4.1.1, §4.2, §6.3.1) <sup>27</sup>
2. Implement Server capability to support both Message Envelope Standards and Message Exchanges specified for Batch if Batch is offered. (§4.1.1, §4.2, §6.3.2)
3. Implement Server capability and enforce one of two specified Submitter Authentication Standards for both Real Time and/or Batch. (§4.1.1)
4. Have a capacity plan such that it can receive and process a large number of single concurrent real-time transactions via an equivalent number of concurrent connections. (§4.3.5.1)
5. Have the capability to receive and process large batch transaction files if batch is supported. (§4.3.5.2)
6. Publish detailed specifications in a Connectivity Companion Guide on its public web site as required by the appropriate Phase I or Phase II CORE Companion Guide Rule. (§4.3.7)

**If a Phase II CORE-Certified Health Plan and Health Plan Vendor elects to optionally implement a Client, it is required to:**

7. Implement Client capability to support one of two Message Envelope Standards and Message Exchanges specified in the rule for Real Time. (§4.1.1, §4.2, §6.3.1)
8. Implement Client capability to support one of two Message Envelope Standards and Message Exchanges specified for Batch if Batch is offered. (§4.1.1, §4.2, §6.3.2)
9. Implement Client capability to support both specified Submitter Authentication Standards for both Real Time and/or Batch. (§4.1.1)

---

<sup>26</sup> This test scenario, conformance testing requirements, test script assumptions and detailed step-by-step test scripts are applicable to the Phase II CORE 270 Connectivity Rule Version 2.2.0.

<sup>27</sup> Section numbers reference the specific section in the Phase II CORE 270 Connectivity Rule that specifies the details of this requirement.

**PHASE II CORE 270 CONNECTIVITY RULE VERSION 2.2.0 CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.10.1 Key Rule Requirements**

**Requires a Phase II CORE-Certified Clearinghouse and other Intermediaries to implement a Server and to:**

10. Implement Server capability to support both Message Envelope Standards and Message Exchanges specified in the rule for Real Time. (§4.1.2, §4.2, §6.3.1)
11. Implement Server capability to support both Message Envelope Standards and Message Exchanges specified for Batch if Batch is offered. (§4.1.2, §4.2, §6.3.2)
12. Implement Server capability and enforce one of two specified Submitter Authentication Standards for both Real Time and/or Batch. (§4.1.2)
13. Have a capacity plan such that it can receive and process a large number of single concurrent real-time transactions via an equivalent number of concurrent connections. (§4.3.5.1)
14. Have the capability to receive and process large batch transaction files if batch is supported. (§4.3.5.2)
15. Publish detailed specifications in a Connectivity Companion Guide on its public web site as required by the appropriate Phase I or Phase II CORE Companion Guide Rules. (§4.3.7)

**Requires a Phase II CORE-Certified Clearinghouse and other Intermediaries to implement a Client and to:**

16. Implement Client capability to support one of two Message Envelope Standards and Message Exchanges specified in the rule for Real Time. (§4.1.2, §4.2, §6.3.1)
17. Implement Client capability to support one of two Message Envelope Standards and Message Exchanges specified for Batch if Batch is offered. (§4.1.2, §4.2, §6.3.2)
18. Implement Client capability to support both specified Submitter Authentication Standards for both Real Time and/or Batch. (§4.1.2)

**Requires a Phase II CORE-Certified Provider and Provider Vendor to implement a Client and to:**

19. Implement Client capability to support one of two Message Envelope Standards and Message Exchanges specified in the rule for Real Time. (§4.1.3, §4.2, §6.3.1)
20. Implement Client capability to support one of two Message Envelope Standards and Message Exchanges specified for Batch if Batch is offered. (§4.1.3, §4.2, §6.3.2)
21. Implement Client capability to support both specified Submitter Authentication Standards for both Real Time and/or Batch. (§4.1.3)

**If a Phase II CORE-Certified Provider and Provider Vendor elects to optionally implement a Server, it is required to:**

22. Implement Server capability to support both Message Envelope Standards and Message Exchanges specified in the rule for Real Time. (§4.1.3, §4.2, §6.3.1)
23. Implement Server capability to support one of two Message Envelope Standards and Message Exchanges specified for Batch if Batch is offered. (§4.1.3, §4.2, §6.3.2)
24. Implement Server capability and enforce one of two both specified Submitter Authentication Standards for both Real Time and/or Batch. (§4.1.3)

**PHASE II CORE 270 CONNECTIVITY RULE VERSION 2.2.0 CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.10.1 Key Rule Requirements**

**Requires all Phase II CORE-Certified Message Receivers to:**

25. Track the times of any received inbound messages. (§4.3.4.1)
26. Respond with the outbound message for the received inbound message. (§4.3.4.1)
27. Include the date and time the message was sent in HTTP+MIME or SOAP+WSDL Message Header tags. (§4.3.4.1)

**Specifies:**

28. Message Enveloping specifications for HTTP MIME Multipart (Envelope Standard A). (§4.2.1)
29. HTTP MIME Multipart payload attachment handling. (§4.2.1.8)
30. Message Enveloping specifications for SOAP+WSDL (Envelope Standard B). (§4.2.2)
31. XML Schema specification for SOAP. (§4.2.2.1)
32. Web Services Definition Language (WSDL) specification. (§4.2.2.2)
33. SOAP payload attachment handling. (§4.2.2.11)
34. Request and response handling for real time, batch, and batch response pickup. (§4.3.1)
35. Submitter authentication and authorization handling. (§4.3.2)
36. Error handling for both Envelope Messaging Standards. (§4.3.3)
37. Envelope metadata fields, including descriptions, intended use syntax and value-sets applicable to both Enveloping Messaging Standards. (§4.4)

**PHASE II CORE 270 CONNECTIVITY RULE VERSION 2.2.0 CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.10.2 Conformance Testing Requirements**

The Phase II CORE Detailed Step-By-Step Test Scripts will not include comprehensive testing requirements for all possible permutations of the Phase II CORE Connectivity Rule.

Conformance must be demonstrated by successful completion of the Detailed Step-By-Step Test Scripts specified below with a CORE-authorized testing vendor.

The Detailed Step-By-Step Test Scripts specify each specific test that must be completed by each stakeholder type for both Real Time and Batch communications. There are one or more Detailed Step-By-Step Test Scripts for each of the following conformance testing requirements of the Phase II CORE Connectivity Rule. Batch Connectivity Test Scripts are only required to be completed if an entity supports Batch communications.

There may be other requirements of the rule not specified here or in The Detailed Step-By-Step Test Scripts. Notwithstanding, Phase II CORE-certified entities are required to comply with all specifications of the rule not included in these Conformance Testing Requirements and Detailed Step-by-Step Test Scripts.

1. A health plan or health plan vendor must demonstrate it has implemented the server specifications for both Message Enveloping Standards.
2. A health plan or health plan vendor must demonstrate it has implemented one of the two submitter authentication standards.
3. A clearinghouse, switch or other intermediary must demonstrate it has implemented the server specifications for both Message Envelope Standards.
4. A clearinghouse, switch or other intermediary must demonstrate it has implemented the client specifications for one of the two Message Envelope Standards.
5. A clearinghouse that handles submissions to health plan must demonstrate it has implemented both submitter authentication standards.
6. A provider or provider vendor must demonstrate it has implemented the client specifications for one of the two Message Envelope Standards.
7. A provider or provider vendor must demonstrate it has implemented both submitter authentication standards.

**PHASE II CORE 270 CONNECTIVITY RULE VERSION 2.2.0 CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.10.3 Test Scripts Assumptions**

1. Entity is Phase I CORE certified.
2. All tests will be conducted over HTTP/S.
3. The message payload is an ASC X12 Interchange.
4. No editing or validation of the message payload will be performed.
5. All submitter authentications are valid; no error conditions are created or encountered.
6. Testing will not be exhaustive for all possible levels of submitter authentication.
7. Test scripts will test for the ability to log, audit, track and report on the required data elements.
8. Rule specifications addressing payload attachment handling are not being tested.
9. Rule specifications addressing error handling are not being tested.
10. The Phase II CORE test scripts will not include comprehensive testing requirements to test for all possible permutations of the Phase II CORE requirements of the rule.

**PHASE II CORE 270 CONNECTIVITY RULE VERSION 2.2.0 CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS  
VERSION 2.1.0 MARCH 2011**

**3.10.4 Detailed Step-by-Step Test Script**

**REMINDER:** Phase II CORE testing is not exhaustive. The Phase II CORE test suite does not include comprehensive testing requirements that test for all possible permutations of each rule. See Test Assumption above.

**NOTE:** The references in parentheses after each test script are references to the above rule items for which the test script is testing – items could be referring to Key Rule Requirement(s), the Conformance Testing Requirement(s) or the associated Test Script Assumption(s). An individual test script may be testing for more than one item, and, as noted in the “Stakeholder” column, each test script tests for the role of the Stakeholder(s) to which the test script applies.

Test #	Criteria	Expected Result	Actual Result	Pass/Fail		Stakeholder <sup>28</sup>				
						Provider	Health Plan	Clearinghouse	Vendor	N/A <sup>29</sup>
Real Time Connectivity Test Scripts										
1.	Implement and enforce <b>one of two</b> Submitter Authentication standards on communications <b>server</b> ( <a href="#">Key Rule Requirement #3 and #12</a> )									
1.1	Implement and enforce use of Username/Password over SSL on communications <b>server</b> ( <a href="#">Key Rule Requirement #3 and #12</a> )	Communications server accepts a valid logon by a client using Username/Password, which is embedded in the message envelope as specified in Phase II CORE Connectivity Rule		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
1.2	Implement and enforce use of X.509 Certificate over SSL on communications <b>server</b> ( <a href="#">Key Rule Requirement #3 and #12</a> )	Communications server accepts a valid logon by a client using X.509 Certificate over SSL		<input type="checkbox"/> Pass	<input type="checkbox"/> Fail	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.	On the authenticated connection as per Test #1, implement capability to support <b>both</b> Message Envelope Standards and envelope metadata for Real Time as a communications <b>server</b> ( <a href="#">Key Rule Requirement #1, #10 and #37</a> )									

<sup>28</sup> The checkmark in each box below indicates the stakeholder type to which the test script applies.

<sup>29</sup> If you believe a specific test, or a portion of a specific test, does not apply to your system, check the N/A box and submit a statement describing your rationale.

**PHASE II CORE 270 CONNECTIVITY RULE VERSION 2.2.0 CERTIFICATION TEST SCENARIOS & STEP-BY-STEP TEST SCRIPTS**

## **4 Appendix**

### **4.1 TEST SUITE SUPPLEMENT**

#### **4.1.1 Using This Supplement**

This Supplement is to be used in conjunction with the Phase II CORE Certification Test Suite. It does not replace any of the Phase II CORE Policies and Rules, but rather provides additional information and details regarding the use and format of the Phase II CORE Master Test Bed Data as it applies to the Phase II CORE 260 Eligibility & Benefits (270/271) Data Content Rule. Only the Phase II CORE 260 Eligibility & Benefits (270/271) Data Content Rule requires the use of the Phase II CORE Master Test Bed Data.

Topics in this Supplement are organized as follows:

§4.1.2 and subsections provides a high-level overview of the Phase II CORE Master Test Bed Data, where the data are found, and how that document is organized

§4.1.3 is a high-level overview of the use of the Phase II CORE Master Test Bed Data by the CORE authorized testing vendor(s)

§4.1.4 and subsections identifies specific allowable exceptions for users when loading the Phase II CORE Master Test Bed Data into their respective system; allowable exceptions relate to the modification or non-use of some of the test data elements

§4.1.5 specifies that only the Phase II CORE Master Test Bed Data can be used for certification testing along with identifying certain data that is not included in the master test bed data

§4.1.6 discusses at a high level the Phase II CORE Certification Test Suite certification testing requirements

§4.1.7 provides an example of the mapping of some of the Phase II CORE test bed data elements to the ASC X12 v5010 270 transaction set

#### **4.1.2 Phase II CORE Certification Master Test Bed Data**

##### **4.1.2.1 About the Base Test Data and Format**

The Phase II CORE Master Test Bed Data (specified in a separate Excel workbook) is comprised of 24 base test “cases” consisting of 16 subscriber only cases and 8 subscriber-with-dependent cases. Also included in the master test bed are data for 13 health plans. Each beneficiary (subscriber and dependent) is assigned to a specific health plan. This Phase II CORE Master Test Bed Data incorporates, builds upon and extends the Phase I CORE Master Test Bed Data. The base test data are specified in a human-readable format in a separate Excel workbook, described in detail below. Although actual Phase II CORE certification testing will use this Phase II CORE Master Test Bed Data as presented in the base test data, the types of transactions that will be tested against this data are specified in the Phase II CORE Certification Test Suite Version 2.1.0 under the Detailed Test Script for the Phase II CORE 260 Eligibility & Benefits (270/271) Data Content Rule.

Note: The Phase II CORE Master Test Bed Data includes all of the Phase I CORE Master Test Bed Data along with additional data necessary for appropriate testing of the Phase II CORE 260 Eligibility & Benefits (270/271) Data Content Rule. Data elements added for Phase II are identified in the Excel workbook

Users should extract all of the test bed data for health plans and beneficiaries from the Excel workbook. Beneficiaries who are dependents of a subscriber are identified as a dependent in the test bed data. Beneficiaries marked as a dependent should be extracted and may be loaded as subscriber to accommodate those health plans that require

**PHASE II APPENDIX: TEST SUITE SUPPLEMENT**  
**VERSION 2.1.0 MARCH 2011**

the assignment of a unique member ID to each beneficiary. In the context of this Appendix and the Phase II CORE Master Test Bed Data, CORE defines beneficiary to mean a person who is eligible to receive benefits under a health benefits plan whether or not the person is the subscriber or a dependent.

The test bed data are provided only in an Excel spreadsheet format. The Excel workbook contains multiple tabs (spreadsheets) as follows:

- Tab 1: The title page of the workbook
- Tabs 2 - 25: Beneficiary test data
- Tabs 26 - 38: Health plan test data

Test bed data are provided in both upper and lower case characters for ease of human readability. Users with systems that require all upper case characters will need to convert lower case characters accordingly when loading the data into their internal system.

Remember, the Phase II CORE Master Test Bed Data applies only to the Phase II CORE 260 Eligibility & Benefits (270/271) Data Content Rule.

#### ***4.1.3 Loading the Test Data and How Vendors Use the Data***

Users may load the test data into their internal systems via manual data entry or by exporting the data into any file format supported by Excel for further automatic processing.

The CORE-authorized testing vendors will use only the Phase II CORE Master Test Bed Data to test each entity according to their stakeholder type. Since Phase II CORE certification testing is not exhaustive, not all test beneficiaries (subscribers/dependents) and their associated health plans may be used in Phase II testing. Nevertheless, users should extract and load all of the Phase II CORE Master Test Bed Data into their internal systems. The specific internal system into which the Phase II CORE Master Test Bed Data are loaded is determined by each user, e.g., a development or production or test system, and may vary by user.

There are fields (cells) in both the Health Plan and Beneficiary data that can be modified in the Phase II CORE Master Test Bed Data. The specific fields are outlined below and highlighted in the actual Phase II CORE Master Test Bed Excel file. Many of the modifiable fields are data elements that are not addressed in or required by the Phase II rule, but are needed for testing. This said, users are not permitted to modify:

- Dates
- Deductible and co-pay amounts that are explicitly shown as zero dollar (0\$) amounts
- Any patient demographic

Should an entity determine it needs to modify any of Phase II CORE Master Test Bed Data in order to load it into their internal systems, such modifications and how the data was adjusted should be reported to CAQH so lessons learned can be applied to later Phases of CORE.

#### ***4.1.4 Allowable Exceptions When Loading Specific Test Data***

Exceptions identified below are the same as for the Phase I CORE Master Test Bed Data. These exceptions are included here for ease of reference.

**PHASE II APPENDIX: TEST SUITE SUPPLEMENT**  
**VERSION 2.1.0 MARCH 2011**

**4.1.4.1 Health Plan Data Options**

*4.1.4.1.1 Group #*

The Group number is not validated by either of the CORE-authorized testing vendor in any of the certification test scripts. Therefore the Group number can be modified, or not used, by any health plan or information source based on its eligibility system requirements for Group number when undergoing certification testing.

*4.1.4.1.2 Health Plan #*

The Health Plan number is not validated by either of the CORE-authorized certification testing vendor(s) in any of the certification test scripts. Therefore the Health Plan number can be modified, or not used, by any health plan or information source based on its eligibility system requirements for Plan number when undergoing certification testing.

*4.1.4.1.3 Health Plan Name*

The Health Plan Name is required by the Phase I CORE rule and its presence in the v5010 271 response transaction is validated by the CORE-authorized certification testing vendor(s). However, the actual name value of the Health Plan Name is not validated by the CORE-authorized certification testing vendor(s) in any of the certification test scripts. Therefore, while the Health Plan Name must be loaded into an entity's testing system, the name value can be modified by any health plan or information source based on its eligibility system requirements for Health Plan Name when undergoing certification testing. When a user modifies the Health Plan Name for any of the health plan test data tabs it must also modify the Health Plan Name on the corresponding beneficiary test data tab in order to retain the appropriate association of the beneficiary to the correct health plan.

*4.1.4.1.4 Health Plan Coverage Level*

The CORE-authorized certification testing vendor(s) can accommodate a health plan or information source modifying the Coverage Level (EB02) from Employee to Individual as needed in order to load the benefit into its eligibility system. Therefore the Coverage Level can be modified by any health plan or information source based on its eligibility system requirements for coverage level when undergoing certification testing.

*4.1.4.1.5 Health Plan Patient Liability*

The CORE-authorized certification testing vendor(s) can accommodate a health plan or information source modifying the data value for Patient Liability data (In-Network and Out-of-Network Annual Base and Remaining Deductible, Co-Payment and Co-Insurance) as needed in order to load the benefit into its eligibility system. When the cell contains a data value that is not an explicit zero dollar (0\$) amount, the actual data value may be modified to an appropriate data value for loading into the eligibility system, but a value MUST be loaded. Additionally, all zero dollar (0\$) amounts MUST be loaded. Therefore, some of the Patient Liability amounts can be modified by any health plan or information source based on its eligibility system requirements for such data when undergoing certification testing. The constraints for not allowing modification of zero dollar (0\$) amounts are related to the Phase II CORE 260 Data Content (270/271) Rule requirements in §4.1.3.1.1 through §4.1.3.3 which specify requirements for using a zero dollar (0\$) amount in the v5010 277 response transaction.

*4.1.4.1.6 ASC X12 Information Source Name*

The name "PlanA Certification Payer" is used only in the NM103 segment in the 2100A Information Source loop. The name of the Information Source is not validated by the CORE-authorized certification testing vendor(s) in any of the certification test scripts. Therefore this value can be modified by any health plan or information source based on its eligibility system requirements when undergoing certification testing.

**PHASE II APPENDIX: TEST SUITE SUPPLEMENT**  
**VERSION 2.1.0 MARCH 2011**

**4.1.4.2 Beneficiary Data Options**

*4.1.4.2.1 Member ID*

The CORE-authorized certification testing vendor(s) can accommodate health plan and information source needs (e.g., length, format, datatype) regarding Member ID (MID) in their testing products. Thus, a health plan or information source may modify the MID in the Phase II Phase II CORE Master Test Bed Data in order to load the test data into its eligibility system.

*4.1.4.2.2 Dependent Beneficiary*

The CORE-authorized certification testing vendor(s) can accommodate health plan or information source needs regarding loading dependents in the Phase II CORE Master Test Bed Data with a unique Member ID (MID) into the health plan or information source eligibility systems as follows:

A health plan or information source may load the subscriber in its eligibility system using the MID as specified in the Phase II CORE Master Test Bed Data for the subscriber and then separately load the dependent from the Phase II CORE Master Test Bed Data into its eligibility system as a subscriber using the MID as specified in the Phase II CORE Master Test Bed Data for the dependent.

Or alternatively, a health plan or information source may modify the dependent's MID in the Phase II CORE Master Test Bed Data to correspond to the subscriber's MID as specified in the Master Test Bed Data and then load the dependent appropriately in its eligibility system.

*4.1.4.2.3 Employee ID*

The Employee ID is not validated by the CORE-authorized certification testing vendor(s) in any of the certification test scripts. Therefore the Employee ID can be modified, or not used, by a health plan or information source based on its eligibility system requirements for Employee ID when undergoing certification testing.

*4.1.4.2.4 Provider Name*

The Provider Name is not validated by the CORE-authorized certification testing vendor(s) in any of the certification test scripts. Therefore the Provider Name can be modified, or not used, by a health plan or information source based on its eligibility system requirements for Provider Name when undergoing certification testing.

*4.1.4.2.5 NPI (National Provider ID)*

The NPI is not validated by the CORE-authorized certification testing vendor(s) in any of the certification test scripts. Therefore the NPI can be modified by a health plan or information source based on its eligibility system requirements for NPI when undergoing certification testing.

*4.1.4.2.6 Gender*

The Gender of a beneficiary is not validated by the CORE-authorized certification testing vendor(s) in any of the certification test scripts. Therefore Gender can be modified, or not used, by a health plan or information source based on its eligibility system requirements for Gender when undergoing certification testing.

*4.1.4.2.7 ASC X12 Information Receiver Name*

The Information Receiver Name is used only in the NM103 segment in the 2100B Information Receiver loop. The name of the Information Receiver is not validated by the CORE-authorized certification testing vendor(s) in any of the certification test scripts. Therefore this value can be modified by any health plan or information source based on its eligibility system requirements when undergoing certification testing.

**PHASE II APPENDIX: TEST SUITE SUPPLEMENT**  
**VERSION 2.1.0 MARCH 2011**

*4.1.4.2.8 Identifiers and Other Data on the ASC X12 Control Segments*

The Phase II CORE Rules do not address the specific use and data content of the ISA, GS and ST Control Segments. However, some test scripts for the Phase II CORE 260: Data Content (270/271) Rule require that the entity undergoing certification testing must be able to conduct a valid ASC X12 Interchange containing either a v5010 270 inquiry or v5010 271 response transaction set.

The Master Test Bed Data does not specify any specific values that must be used in these control segments. Users are referred to the X12N HIPAA-adopted v5010 270/271 Implementation Guide Appendix for the proper use and values.

**4.1.5 Using the Test Data**

All CORE-authorized certification testing vendor(s) will use only data from the Phase II CORE Master Test Bed Data, combined with the Phase II CORE Certification Test Suite Scenarios and Detailed Test Scripts, when conducting Phase II CORE certification testing for the Phase II CORE 260 Eligibility & Benefits (270/271) Data Content Rule.

Although the Phase II CORE Master Test Bed Data are comprised of 32 beneficiaries (subscribers/dependents) and 13 associated health plans, the actual Phase II CORE Certification Testing does not include all beneficiaries (subscribers/dependents) and associated health plans. Each CORE-authorized testing vendor will determine which of the beneficiaries (subscribers/dependents) and associated health plans will be used during actual certification testing. This means that CORE-authorized testing vendor(s) will only create v5010 270s and v5010 271s and accept corresponding v5010 270s and v5010 271s that match the actual or modified beneficiary and health plan information in the Phase II Phase II CORE Master Test Bed Data.

The Phase II CORE Master Test Bed Data does not contain ISA/GS sender and receiver IDs. The actual v5010 270 and v5010 271 transaction sets sent during certification testing should have appropriate ISA/GS sender and receiver IDs as agreed to between the CORE-authorized certification testing vendor and the user, as well as appropriate control numbers at the ISA/GS/ST/BHT03 levels as required by the ASC X12 Standards and the HIPAA-adopted v5010 270/271 Implementation Guides. Batch test transaction cases may contain multiple eligibility requests and responses in each message. Therefore, organizations planning to undergo Phase II CORE-certification testing with a CORE-authorized certification testing vendor should extract the Phase II CORE Master Test Bed Data needed to appropriately load their internal databases for internal testing and Phase II CORE-certification testing purposes.

The Phase II CORE Master Test Bed Data are not intended to provide all of the data elements that the user may need to completely populate its internal test file or test database in order to test for Phase II CORE compliance against the Detailed Test Scripts. Depending upon their specific database structure requirements, users may be required to add other test data, or modify the Phase II CORE Master Test Bed Data as outlined in §4.1.3.

**4.1.6 Test Data and Phase II CORE Certification**

The Phase II CORE Certification Test Suite defines specific certification testing requirements and detailed Test Scripts for each of the Phase II CORE rules. These detailed Test Scripts are not intended to exhaustively and comprehensively test all requirements of the Phase II CORE rules. Rather, the Test Scripts focus on a key subset of each rule's requirements. Consequently, the scope of the Phase II CORE Master Test Bed Data are limited to data needed for the entity seeking to become Phase II CORE-certified to create and populate its internal files and/or databases for internal pre-certification testing and Phase II CORE certification testing for the Phase II CORE 260 Eligibility & Benefits (270/271) Data Content Rule.

Use of any non-CORE base test bed data for Phase II CORE certification testing outside of the guidelines set forth in §4.1 may result in unsuccessful testing results, which will not be accepted by CAQH.

**PHASE II APPENDIX: TEST SUITE SUPPLEMENT  
VERSION 2.1.0 MARCH 2011**

**4.1.7 Phase II CORE Certification Master Test Bed Data References**

**4.1.7.1 v5010 270/271 ASC X12 Reference Sheet**

This table provides an example of the data mapping from the Phase II CORE Master Test Bed base data to its respective ASC X12 data element.

HEALTH PLAN				ASC X12 Mapping
Field	Min Len	Max Len	Data Attributes	Loop/Segment
NPI	10	10	Alpha Numeric	2100B/NM109 with 2100B / NM108 = "XX"
Subscriber ID	2	30	Alpha Numeric	2100C/NM109 with NM108 = "MI"
Subscriber First Name	1	25	Alpha Numeric	2100C/NM104
Subscriber Last Name	1	35	Alpha Numeric	2100C/NM103
Subscriber DOB	1	35	CCYYMMDD	2100C/DMG02 with DMG01 = "D8"
Service Type Code	1	2	Alpha Numeric	2110C or 2110D/EB03
Dependent First Name	1	25	Alpha Numeric	2100D/NM104
Dependent Last Name	1	35	Alpha Numeric	2100D/NM103
Dependent DOB	1	35	CCYYMMDD	2100D/DMG02 with DMG01 = "D8"
Health Plan Name	1	50	Alpha Numeric	2110C or 2110D/EB05
Health Plan Number	1	17	Alpha Numeric	2100C/REF02 with REF01 = "18"
Group Number	1	17	Alpha Numeric	2100C/REF02 with REF01 = "6P"

In addition to the Phase II CORE Master Test Bed data, the following reference sources will be of assistance when conducting Phase II CORE-certification testing:
