CAQH Committee on Operating Rules for Information Exchange (CORE)
CAQH CORE Connectivity Rule vC4.0.0
CORE-required Processing Mode and Payload Type Tables vC4.0.0

1 Introduction

The CAQH CORE-required Processing Mode Table specifies the transaction processing mode requirements (i.e., Real Time and/or Batch) for transactions addressed by as well as supported by the CAQH CORE Connectivity Rule vC4.0.0. (See §3.3 of the rule.)

The CAQH CORE-required Payload Type Table specifies the comprehensive and normative set of identifiers for the CAQH CORE Envelope Metadata Payload Type Element in §4.4.2 of the CAQH CORE Connectivity Rule vC4.0.0.

CAQH CORE recognizes that as this rule becomes widely adopted and implemented in health care the experience and learning gained from implementers may indicate a need to modify either the CAQH CORE-required Processing Mode Table or the CAQH CORE-required Payload Type Table or both to meet emerging or new industry needs. Given this anticipated need, it is critical to develop a process and policy to enable the review and maintenance of these tables specified in this companion document to this rule.

Such review and maintenance of either the CAQH CORE-required Processing Mode Table or the CAQH CORE-required Payload Type Table or both will follow standard CAQH CORE processes for rule revisions. CAQH CORE will develop such a process and policy for the first review of potential revisions of these tables in accordance with CAQH CORE Guiding Principles following the approval of the CAQH CORE Operating Rules. The first review may commence:

- One year after the passage of a Federal regulation requiring implementation of this CAQH CORE rule

Or

- When Federal regulation or Federal notices to the industry impacting the transactions addressed by this rule are published.

Substantive changes to the tables will be reviewed and approved by CAQH CORE as necessary to ensure accurate and timely revision. The impact of any such changes to any CAQH CORE Infrastructure Rule will need to be considered during the review of potential revisions. CAQH CORE Infrastructure Rules address other requirements for conducting the transactions addressed by this rule, such as response times for Real Time and/or Batch Processing Modes, System Availability, Companion Document flow and format, etc.

2 Processing Mode Table

The table below is a listing of the transactions to which the CAQH CORE Connectivity Rule vC4.0.0 applies. For each of the transactions, the following are identified in this table:

- Required and optional processing modes for the transaction

These processing mode requirements apply when a HIPAA-covered entity and its agent are exchanging the transactions addressed by this rule in conformance with the requirements specified in the CAQH CORE Connectivity Rule vC4.0.0 §4 and subsections.

These processing mode requirements also apply when a HIPAA-covered entity and its agent are exchanging the transactions addressed by the CAQH CORE Connectivity Rule vC4.0.0 using any other connectivity method as permitted by the CAQH CORE Safe Harbor. (See §6)

Any updates made to the Processing Mode Table may require corresponding updates to Payload Type Table specified in §3 of this document.

For the X12 transactions where Batch Mode is required and Real Time mode is optional, Payload Types are included in the Payload Type Table to support both Real Time and Batch Processing Modes recognizing that Real Time Processing Mode is not widely used for some of the transactions.

**CAQH Committee on Operating Rules for Information Exchange (CORE)
CAQH CORE Connectivity Rule vC4.0.0
CORE-required Processing Mode and Payload Type Tables vC4.0.0**

Processing Mode Table	
Transaction	Processing Modes
X12 v5010X279 270/271	Real Time Required, Batch Mode Optional
X12 v6020X314 275	<i>(Note: Not yet addressed in a CORE rule)</i>
X12 v6020X316 275	<i>(Note: Not yet addressed in a CORE rule)</i>
X12 v5010X212 276/277	Real Time Required
X12 v5010X213 277	Either Real Time or Batch Mode; both modes may be implemented.
X12 v6020X313 277	Either Real Time or Batch Mode; both modes may be implemented.
X12 v5010X214 277CA	Batch Mode Required
X12 v5010X217 278	Either Real Time or Batch Mode; both modes may be implemented, at least one mode must be implemented
X12 v5010X218 820	Batch Mode Required, Real Time Optional
X12 v5010X220 834	Batch Mode Required, Real Time Optional
X12 v5010X307 834	Either Real Time or Batch Mode
X12 v5010X221 835	Batch Mode Required, Real Time Optional in Response to Real Time Claim Adjudication
X12 v5010X223 837I	Batch Mode Required, Real Time Optional
X12 v5010X222 837P	Batch Mode Required, Real Time Optional
X12 v5010X224 837D	Batch Mode Required, Real Time Optional
X12 v5010X231 999	Either Real Time or Batch Mode as specified in corresponding operating rule

Note: The Processing Mode Requirements in the above table are addressed in the CAQH CORE Operating Rules for Eligibility, Claim Status, Payment & Remittance, Prior Authorization, Healthcare Claims, Benefit Enrollment, Premium Payment, and Attributed Patient Roster.

3 Enumeration of Payload Type Fields

The CAQH CORE Connectivity Rule vC4.0.0 requires that the X12 payload must be wrapped with a SOAP envelope, which contains metadata about the transaction payload. (See §4.4 of the CAQH CORE Connectivity Rule vC4.0.0.) This metadata includes a Payload Type element. The required coded value set for this metadata element when an X12 payload is being exchanged is enumerated in the Payload Type Table below. The enumerated payload types support the processing modes specified in the Processing Mode Table above as well as the messaging interactions for the transactions as described in §8.3 of the rule.)

Any updates made to the Payload Type Table may require corresponding updates to the Processing Mode Table.

The enumeration of payload types in this table are normative and comprehensive, hence this set of enumerated values goes beyond the set of transactions addressed by the CAQH CORE Connectivity Operating Rule vC4.0.0.

The payload types for the HIPAA mandated X12 v5010 transactions may be updated when Federal regulation or Federal notices to the industry impacting the transactions addressed by this rule are published.

Note: The table below includes payload type values for all HIPAA mandated and non-mandated X12 v5010 transactions, including those transactions that are addressed in CAQH CORE Operating Rules for Eligibility, Claim Status, and Payment & Remittance, as well as some X12 v6020 transactions.

- HIPAA-covered entities and their agents are required to use this CAQH CORE Connectivity Rule vC4.0.0 for the exchange of claims, prior authorization (including other patient events as identified in the X12 v5010 278 Technical Report Type 3), benefit enrollment and maintenance, and health plan premium payment transactions, subject to the Safe Harbor provisions of the CAQH CORE Connectivity Rule vC4.0.0.
- HIPAA-covered entities and their agents may also use this CAQH CORE Connectivity Rule vC4.0.0 for the exchange of eligibility, claim status and ERA transactions in accordance with the Safe Harbor provision of the

**CAQH Committee on Operating Rules for Information Exchange (CORE)
CAQH CORE Connectivity Rule vC4.0.0
CORE-required Processing Mode and Payload Type Tables vC4.0.0**

CAQH CORE Connectivity Rule vC2.2.0. However, this does not permit any HIPAA-covered entity and its agent to discontinue support for the exchange of the eligibility, claim status and ERA transactions as required in the CAQH CORE Connectivity Rule vC2.2.0.

- HIPAA-covered entities and their agents may also use this CAQH CORE Connectivity Rule vC4.0.0 for the exchange of X12 transactions not mandated by HIPAA.
