

Take the guess work out of the latest data sharing regulations

The CAQH Endpoint Directory, a centralized directory that securely publishes validated endpoints, simplifies how health plans and third-party apps find and share information. This national source of truth automates manual processes and enables compliance with federal regulations.

BENEFITS

- Meet compliance requirements for federal regulations
- Save time establishing and maintaining connections with other payers and third-party apps
- Have confidence in technical integrations with third-party apps

HOW IT WORKS

- Verifies the identity of payer and third-party app participants
- Supports the exchange of client credentials and facilitates connection requests between parties
- Confirms privacy and security attestations, privacy policies and data use agreements
- Offers conformance testing and validation of endpoints in accordance with industry government practices
- Lets payers share information about endpoints, including capability statement imports
- Displays third-party app badges to quickly determine IRS validity, CARIN attestation status and other security certifications

INDUSTRY-WIDE PARTICIPATION

>50%

of endpoints for all CMS covered lives

150+

Payers' organizational information is searchable immediately

155+

Endpoints are listed and available to-date
