

## More Provider Data. Less Redundant Paperwork.

CAQH ProView<sup>™</sup> — The Next Generation Universal Provider Datasource<sup>®</sup> — is the trusted electronic solution and industry standard for capturing and sharing healthcare provider self-reported data. More than 1.3 million physicians and other providers now enter and maintain a wide range of information within CAQH ProView, each creating a comprehensive “provider profile” to share with the healthcare organizations they choose.

Nearly 800 health plans, hospitals and provider groups use CAQH ProView to:

- Streamline credentialing.
- Improve network provider directories.
- Speed claims processing and adjudication.
- Simplify additional administrative processes requiring demographic and professional provider data.

CAQH ProView reduces duplicative paperwork and saves millions of dollars in annual administrative costs for providers and participating organizations.

It offers enhanced usability and functionality over traditional methods of provider data collection, including:

- User-friendly layout and logical workflow.
- Fully electronic, eliminating the need for paper forms, faxing and mailing.

- Robust standards to maintain the privacy and security of provider data.
- Access to more provider profile information, including additional types of provider relationships (e.g., non-participating and delegated providers) and ownership disclosure.

The availability and sharing of electronic data is driving a revolution in our nation’s healthcare system, and access to accurate, timely provider data is critical for its success. CAQH ProView is central to this effort.

### CAQH ProView Benefits

The innovative design and large user base of CAQH ProView make it the leading industry solution for self-reported provider administrative information. It was developed in collaboration with health plans, health systems and providers to ensure it meets their needs, both in the types of information collected and the ease of sharing it.

#### Health Plans, Hospitals and Provider Groups

- Receive the most complete, up-to-date set of information available from every type of healthcare provider delivering health and wellness services.
- Reduce time and resources needed for credentialing, network directory maintenance and other administrative functions requiring provider data.
- Real-time system validation of select provider data against industry sources reduces incorrect data entry, increasing data quality and decreasing delays in data processing.
- New application programming interface (API) capabilities provide access to provider data through real-time web services.
- Secure electronic exchange of roster and provider data (extract) files, with roster exception reporting and customizable extract reports. Flexibility to receive provider data in multiple formats: ASCII, XML or PDF.

- Benefit from ongoing system enhancements, including introduction of new data fields.

#### Healthcare Providers

- Save time and frustration by entering data only once into the “provider profile,” using an intelligent workflow design. Then, submit it to multiple authorized healthcare organizations in every state.
- Stores data electronically, eliminating paper submission. Upload supporting documents directly to improve the quality and timeliness of completed applications.
- Maintain total control of information with enhanced security features.
- Self-register with the system even before a health plan, hospital, health system or provider group initiates the application process.
- Available to providers at no cost.

#### Practice Managers

- Maintain information about multiple locations and provider lists.
- Submit files with pre-populated data using a new ‘bulk upload’ option, reducing the amount of profile information that individual providers must submit.
- Access to detailed activity log and export history, as well as corresponding provider activity.
